Indira Gandhi Delhi Technical University for Women

(Established by Govt. of Delhi vide Act 09 of 2012) Kashmere Gate, Delhi–110006

Scheme of Examination &

Detailed Syllabus

(w.e.f. Academic Year 2019-2020 onwards)

For

Master of Computer Applications

Department of Information Technology

PROGRAMME OUTCOMES

Post Graduates of Master of Computer Application will be able to:

PO1. Apply knowledge of Computing fundamentals, Computing specialization, Mathematics, and domain knowledge appropriate for the computing specialization to the abstraction and conceptualization of computing models from defined problems and requirements.

PO2. Design and develop applications to analyze and solve all computer science related problems.

PO3. Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.

PO4. Analyze and review literatures to invoke the research skills to design, interpret and make inferences from the resulting data.

PO5. Integrate and apply efficiently the contemporary IT tools to all computer applications.

PO6. Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.

PO7. Involve in perennial learning for a continued career development and progress as a computer professional.

PO8. Function effectively both as a team leader and team member on multi-disciplinary projects to demonstrate computing and management skills.

PO9. Communicate effectively and present technical information in oral and written reports.

PO10. Understand and assess societal, environmental, health, safety, legal, and cultural issues within local and global contexts, and the consequential responsibilities relevant to professional computing practice.

PO11. Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary environments.

PO12. Identify a timely opportunity and using innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.

PROGRAMME SPECIFIC OUTCOMES

PSO1. Design, develop and implement interdisciplinary application software projects to meet the demands of industry requirements using modern tools and technologies.

PSO2. To prepare graduates who will perform both as an individual and in a team through good analytical, design and implementation skills.

PSO3. To prepare graduates who will be lifelong learners through continuous professional development.

LIST OF DEPARTMENTAL ELECTIVE COURSES

Fundamentals of Information Technology

Course Code: MCA-101 Contact Hours: L-3 T-0 P-2 Course Category: DCC Credits: 4 Semester: 1

Introduction

The course Fundamentals of Information Technology has become essential in the present age of computer technology and information, as the applications of information technology can be found in all aspects of our lives. This course is designed to meet the requirements of students having very little knowledge of computers and help them to learn from the basic fundaments of computers through applications of information technology.

Course Objectives

- To introduce skills relating to IT basics, computer applications, programming, Operating systems and computer network basics etc.
- To help students to understand specialized advanced courses in the Information Technology.

Pre-requisite: Preliminary knowledge of computer, their operations and applications.

Course Outcomes:

CO1: Understanding the concept of input and output devices of computers.

CO2: Learn the functional unit and classify the type of computers, how they process information and how the individual computer interact with the other computing system and devices.

CO3: Understand an operating system and its working, and solve the common problems related to operating system.

CO4: Study to use the computer safely, legally, and responsibly.

Pedagogy

Lectures will be delivered via discussions, whiteboard, slideshows and assignments.

UNIT-I	10 hrs
Information Concepts and Processing : Definition of Information Technology, Quali	ity, need of
information system, levels of information, data processing, definition of knowledge	, Range of
application : Scientific, business, educational, e-commerce, web publishing, M	Ianagement
Information System, Decision Support System, inventory control, and industrial contr	ol.
Number System: Bit, byte, binary, decimal, hexadecimal, and octal systems, conversion	on from one
system	
to the other, Binary Arithmetic: Addition, subtraction and multiplication.	
Representation of Information: Integer and floating-point representation, Compleme	nt schemes,
Character codes (ASCII, EBCDIC, BCD, Excess-3, Grey).	
UNIT-II	10 hrs
Introduction to Computer software: Introduction to system software, categories of	system and
application, Distinction between systems software and Application software, Intro	oduction to
Software Development activities (Requirement, Design (algorithm and flowchart), Codi	ng, Testing,
Installation & Maintenance).	
Introduction to Computer Hardware: CPU, Memory, different types of memor	ries (Cache
memory, virtual memory and Auxillary memory), Various I/O devices.	
Programming languages and Translators: Low- and high-level languages, assembly	y language,
4GL and 5GL Introduction to assemblers, compilers, interpreters, linkers and loaders.	10.1
UNIT-III	10 hrs
Operating systems (Only introductory level): Evolution, introduction to OS, fur	nctions and
facilities, Different types of operating systems (Batch, multi-programming, tim	ie sharing,
multiprocessing, PC operating system, real time operating system, single tasking and n	nultitasking
OS, single user and multi-user OS), Introduction to process management: process	ss, threads,
scheduling, characteristics of MS-DOS and Unix operating systems, DOS and UNIX	commands,
Introduction to Database Management System and its types.	101
UNIT-IV	10 hrs
Communication and Computer Network: - Basic elements of a Communication Sys	stem, , Data
transmission media, Digital and Analog, Network Types (LAN, WAN and MAN), inter	networking
devices and Communication Protocols, Intranet and Extranet, Hypertext Markup Langua	age, www,
HTTP, HTTPs, FTP, Telnet, Web Browsers, Search Engines, Email, Digital Signatures	s, Firewall.

Problem Solving using C Programming

Course Code: MCA-103 Contact Hours: L-3 T-0 P-4 Course Category: DCC

Credits: 5 Semester: 1

Introduction:

This course provides an introduction to computer concepts, logic, and computer programming. It includes designing, coding, debugging, testing, and documenting programs using a high-level programming language.

Course Objectives:

- To learn the fundamental programming concepts and methodologies, essential to build efficient C programs.
- To practice the fundamental programming methodologies in the C programming language via lab sessions.
- To code, document, test, and implement a well-structured, robust computer program using the C programming language.
- To write reusable modules (collections of functions) in C.

Pre-requisite: None

Course Outcomes:

CO1: Recall the basic principles of C Programming.

CO2: Illustrate the use of Conditional Statements & Looping Concepts.

CO3: Develop the Concepts of programming Language.

CO4: Create a program using File operations.

Pedagogy: The class will be taught using theory and tutorial based methods which include board teaching and presentations/slides, discussions etc. Along with classroom teaching, students will also be given assignments regarding the topics covered.

UNIT I	11 hrs
Introduction to Programming and its Environment. Need for programming Leve	ls (High and Low)
of programming, Development process (Preprocessor, Compiler, Linker and Loader).	Linux –commonly
used commands like mkdir, cd, ls, etc., compiler –gcc, editor –vim	
C Language Introduction: Program Structure through simple C programs, Constant	nts and Variables,
Data Types -Basic and Advanced, Operators and Expressions, Managing input and	output operations
using printf and scanf, Command line input, Conditional constructs, Looping construct	s. Problem solving
exercises based on -conditional and looping constructs	11.5
UNIT II	11 hrs
Pointers, Arrays and Strings: Concept of memory, Definition, Usage -address	s of and value at
operation, Pointer arithmetic. Pointer to pointer, Arrays (Single and Multi-dimensional	l) and Strings-with
emphasis on role of pointers in them, Pointer to Array, Array of pointers. Problem	solving exercises
based on –pointers, arrays and strings.	
Procedural programming: Functions (Function Prototyping, passing parameters thr and call by reference, returning values, recursion). Program organization using funct	ough call by value
and can by reference, returning values, recursion), Program organization using functions	ions, Emphasis on
Teusaonity through C examples. I robern solving excretises based on -runctions.	10 hrs
File nandling: Concept of streams, File pointer, Reading and writing to file, Closin access in a file. Error handling during file I/O operations. Broblem solving everying	ng a file, Random
Problem Solving: Algorithm, Elowchart and Pseudo code, Program design	es based off -ffies.
UNIT IV	10 hrs
Olvin IV	
Advanced concepts: Pointers to functions and Caliback functions. Storage classes (a register) The C Preprocessor (#define #undef #include #if conditional inclusion	uto, extern, static,
processor directives) Defining New Data Types–Structures Unions Enumerated T	vnes
Dynamic Memory Management: malloc. calloc. realloc. size of. free.	ypes
Introduction to Data Structure: Linked Lists and dynamic data structures. Problem	solving exercises
based on –advanced concepts and data structure	U

Discrete Mathematics

Course Code: MCA-105 Contact Hours: L-3 T-1 P-0 Course Category: DCC Credits 4 Semester 1

Introduction

Discrete mathematics forms the mathematical foundation of computer and information science. This course familiarizes with a broad range of mathematical objects like sets, functions, relations, graphs, that are omnipresent in computer science.

Course Objectives

- To explain formal statements and their proofs; coming up with rigorous proofs themselves; and coming up with interesting results.
- To show at least one interesting and non-trivial result and give a full proof of introduced concepts.

Pre-requisites:

Basic mathematical operations

Course Outcomes:

CO1: Apply logical reasoning to solve a variety of problems

CO2: Develop understanding of logic, sets and functions.

CO3: Apply algebraic structure in combinatorial mathematics.

CO4: Develop an understanding of how graph and tree concepts are used to solve problems arising in the computer science.

Pedagogy:

The materials are delivered mostly through lectures videos to make complex subject easy to comprehend. More details on certain lessons are delivered through examples to provide more explanation.

UNIT I	10 hrs
Set Theory: Notations, Types of sets, Multisets, Ordered pairs, Cartesian product, Co	ombination of sets,
Set Algebra, Proofs of some general identities on sets.	
Relations: Representation, Relation types and properties, Operations on relations, Equ	vivalence relations,
Equivalence Partitions, Equality of relations, Order of relations, Partial ordering, Rec	ursive definition of
relation,	
Closure: Reflexive, Symmetric and Transitive closures, Warshall's algorithm to c	compute transitive
closure of a relation, Composite Relations, Functions, Classification of function	ons, Operation on
functions.	
Boolean Algebra: Introduction, Boolean functions, Representations and simplified	cation of Boolean
functions, Theorems of Boolean algebra, Algebraic manipulation of Boolean e	xpressions, Logic
implications, Karnaugh maps, Application of Boolean functions to synthesis of circ	uits.
Partially Ordered Sets and Lattices: Posets, lattices, Combination of partial order	sets, Properties of
lattices, Lattices as Algebraic systems, Sub lattices, Homomorphism, Hasse's di	iagram, Bounded,
Complemented, Modular and Complete lattice.	
UNIT II	10 hrs
Combinatorics: Principle of mathematical induction, Selected problems on mathe	matical induction,
Fundamental principles of counting, Pigeonhole principle, Principle of inclusion ar	nd exclusion.
Discrete Numeric Functions and Recurrence Relations: Introduction, Asymptotic	behaviour, Linear
recurrence relations with constant coefficients (homogeneous and non-homogeneou	s case, Solution of
linear recurrence relations using generating functions.	
Logic: Propositional logic, Tautology, Predicate Algebra, Quantifiers, Operators, M	Aethods of
Proofs: direct, formal, informal, contradiction, induction, contraposition, exhaustiv	ve.
UNIT III	10 hrs
Discrete Probability: Sample space, Discrete Sample space, Types of Events: mu	tually exhaustive,
mutually exclusive, Axioms of probability, Conditional probability, Total probability	y, Bayes' theorem,
Univariate and bivaiate probability distributions, Discrete random variables, Probab	ility mass function
and cumulative distribution function, Mode and median and variance of a univar	iate and bivariate
discrete probability distribution, Mathematical Expectation (Univariate and bivariate	Random Variable),
Expectation of a function of a random variable, Effect of change of origin and se	cale on mean and
variance. Expectation and variance of sums of random variables. Conditional expectation	ion and prediction.
The Central Limit Theorem, Algebraic Structures: Definition, Groups, Subgroups	and order, Cyclic
Groups, Cosets, Lagrange's theorem, Semi groups and monoids, Cyclic semigraphs	and submonoids,
Congruence relations on semigroups, Normal Subgroups, Dihedral groups, Permutati	ion and Symmetric
groups, Group Homomorphisms, Properties of Rings and Fields, Integers Modu	ilo n, polynomial
arithmetic, quadratic residues, reciprocity, discrete logarithms, elliptic curve arithm	ietic.
Graph theory: Path, cycles, handshaking theorem, bipartite graphs, sub-graphs, gr	aph isomorphism,
operations on graphs, Eulerian graphs and Hamiltonian graphs, planar graphs, Euler	formula, traveling
salesman problem, shortest path algorithms. Graphs, Euler tours, planar graphs, Ha	amiltonian graphs,
Euler's formula, applications of Kuratowski's theorem, graph coloring, chromatic p	olynomials, trees,
weighted trees, shortest path algorithms, spanning trees, the max-flow min-cut the	orem.
Applications of Discrete Mathematics in Computer Science: Information Theor	v Semantic Web
Formal Software Verification, Theorem Proving, Game Theory, Cryptography	<i>j</i> , <i>s</i> emance <i>w</i> ee,

Computer Organization

Course Code: MCA- 107 Contact Hours: L-3 T-0 P-2 Course Category: DCC

Introduction:

The course aims to provide students with an understanding of the design of fundamental blocks of a computer system and interfacing techniques of these blocks to achieve different configurations of a computer system. It covers the basic topics in the design of computational units, instruction organization, memory systems, control and data flow, and interconnections.

Course Objective:

- To have a thorough understanding of the basic structure and operation of a digital computer.
- To study the different ways of communicating with I/O devices and standard I/O interfaces.

Pre-requisite: Digital Systems and Computer Design

Course Outcome:

CO1: Understand different number systems, binary addition and subtraction, 2's complement representation and operations with this representation.

CO2: Comprehend the theory and architecture of central processing unit, pipelining, interrupt handling and memory organization

- CO3: Analyze some of the design issues in terms of speed, technology, cost, performance.
- CO4: Design combinational circuits for basic components of computer system and applications using multiplexers, decoders, flip flops etc.

Pedagogy:

The class will be taught using theory and tutorial-based methods which includes board teaching and presentations/slides, case studies, discussions etc. Along with classroom teaching, students will also be given assignments regarding the topics covered. The course instructor will demonstrate and explain about applications of Computer organisation techniques with research orientation.

UNIT	'-I	10 Hours			
Intro	duction and overview: Multiplexes, Demultiplexers, Decoders, Adders				
Flip-f	Flip-flops: S-R, JK, D, T, Master Slave and Edge triggered, Registers, shift registers, Bi-				
direct	ion shift registers.				
Regis	ter Transfer and Microoperation: Register transfer language, register tra	nsfer, bus and			
memo	ry transfer, arithmetic microoperations, logic microoperations, shift micro	cooperations.			
UNIT	-II	11 Hours			
Basic	Computer Organization and Design: Instruction codes, computer regist	ers, computer			
instru	ctions, timing & control, instruction cycle, memory reference instructions	, input-output			
and in	terrupts, design of basic computer, design of accumulator logic.				
Micro	programmed Control Unit: Control memory, address sequencing.				
Centr	al Processing Unit: Introduction, general register organization, stack	organization,			
instru	ction formats, addressing modes.				
UNIT	-III	11 Hours			
Pipeli	ne and Vector processing: Parallel Processing, pipelining, arithmetic pi	ipeline, RISC			
Pipeli	ne, Vector Processing, Array Processors.				
Input	Output Organization: Peripheral devices, input-output interface, asyn	chronous data			
transf	er, modes of data transfer, priority interrupt, direct memory access,	input-output			
proces	ssor.				
UNIT	-IV	10 Hours			
Memo	ory organization: Memory hierarchy, main memory, auxiliary memory	y, associative			
memo	ry, cache memory, virtual memory, memory management hardware.				
Multi	processors: Characteristics of multiprocessor, Interconnection Structure, I	nterprocessor			
Comn	nunication & Synchronization.

Professional Skills		
Course Code: HMC-101	Credits: 3	
Contact Hours: L-3 T-0 P-0	Semester: 1	
Course Category: HMC		

Introduction - This course aims to enhance the students' professional communication skills by providing adequate exposure in verbal and nonverbal skills and related sub skills. The course is designed to provide awareness of appropriate communication strategies with social, organizational and cultural awareness. The course empowers students in day to day professional soft skills like listening skills, presentation skills, and group discussion etc.

Course Objectives:

- To know the process of professional communication and its various components.
- To improve language skills i.e. Listening Skills, Speaking Skills, Reading Skills and Writing Skills (LSRW).
- To create literary sensibility and enhance comprehension skills.
- To develop confidence for communicating in English language.

Pre-requisites: None

Course Outcome – After completion of the course, the students should be able to:

CO1: Understand the importance of flawless communication in professional environment.

CO2: Enrich knowledge and improve skills required for corporate world.

CO3: Evaluate theoretical frameworks and concepts for the study of communication.

CO4: Develop ethical professional habits.

Pedagogy:

To provide knowledge of various communication processes through innovative and interactive classroom teaching sessions. To evaluate students' progress through practical sessions including Group discussion, Presentations, role plays and JAMs.

UNIT-I 10 Hours
Self analysis through SWOT, Johari window, Personality Development, Intra personality
communication vs. Inter personal Communication and Relationships, Leadership Skills
Team Building, Public speaking, Individual Communication, Self advertising, Over statin
and under stating, Time Management.
UNIT-II 12 Hours
Communication Boosters: Body language, Voice, Posture and gesture, Eye contact, Dres
codes, Verbal crutches, Pronunciation, Contextualization: creating and understandin
contexts, Aura words.
Interview: Types of Interview, Preparing for the Interviews, Attending the Interview
Interview Process, Employers Expectations, General Etiquette.
UNIT-III 10 Hours
Group Discussions: Guidelines, Expressions, Evaluation. Video conferencing, Telephon
skills, Teleconferencing, Participation in meetings: chairing sessions. Presentation Skill
Types of presentation, Capturing Data, Guidelines to make an effective presentation, Bod
Language, Voice Modulation, Integrating voice & picture, Audience Awareness
Presentation Plan, Visual Aids, Forms of Layout, Styles of Presentation, Managemer
presentations.
UNIT-IV 10 Hours
UNIT-IV 10 Hours Letter writing: Types of Letters, Business letters, E-mail, Fax, Pro-forma culture, Drafting

Data Structures		
Course Code: MCA-102	Credits: 5	
Contact Hours: L-3 T-0 P-4	Semester: 2	
Course Category: DCC		

Introduction:

This course covers the design, analysis, and implementation of data structures and algorithms to solve engineering problems using an object-oriented programming language. Topics include elementary data structures, (including arrays, stacks, queues, and lists), advanced data structures (including trees and graphs), the algorithms used to manipulate these structures, and their application to solving practical engineering problems.

Course Objectives:

- To learn efficient storage mechanisms of data for an easy access.
- To design and implement various basic and advanced data structures.
- To introduce various techniques for representation of the data in the real world.
- To develop applications using data structures.

Pre-requisite: Standard programming language C/C++, mathematical knowledge, knowledge of basic probability.

Course Outcomes:

CO1: Understand the basics of data structures to represent data items in the real world.

CO2: Evaluate the time and space complexities of Algorithms.

CO3: Apply and implement the application of sorting and pattern-matching algorithms.

CO4: Create projects using a variety of data structures such as stacks, queues, hash tables, binary trees, search trees, heaps, graphs, and B-trees.

Pedagogy: The class will be taught using theory and tutorial-based methods which include board teaching, presentations/slides, discussions and case-based studies. Along with classroom teaching, students will also be given assignments regarding the topics covered.

UNIT-I 11 Hours		
Introduction: Abstract Data Type, Elementary Data Organization, Measuring efficiency of		
an Algorithm, Time and Space Complexity, Asymptotic notations. Arrays: Single and		
Multidimensional Arrays,		
Representation of Arrays: Row Major Order, and Column Major Order, Application of		
arrays, Sparse Matrices.		
Linked lists: Array and Dynamic Implementation of Single Linked Lists, Doubly Linked		
List, Circularly Linked List, Operations on a Linked List. Insertion, Deletion, Traversal,		
Polynomial Representation and Addition.		
Stacks: Stack operations: Push & Pop, Array and Linked list implementation of Stack,		
Applications: Prefix and Postfix Expressions, Evaluation of postfix expression, Recursion.		
UNIT-II 11 Hours		
Queues: Operations: Create, Add, Delete, full and empty queues, Array and linked		
implementation of queues, Dequeue, Circular queues and Priority Queue. Hashing: Hash		
Function, Hash Table, Collision Resolution Strategies.		
Trees: Basic terminology, Binary Trees, Array and linked list implementation, Types of		
Binary Tree, Extended Binary Trees, Algebraic Expressions, Tree Traversal algorithms:		
Inorder, Preorder and Postorder, Threaded Binary trees, Search, Addition and deletion of an		
element in a binary tree, AVL Trees, Heaps, B Trees, Trees and their applications, Evaluating		
an expression tree.		
Searching: Sequential search, Binary Search. Sorting: Insertion Sort, Selection, Bubble Sort,		
Quick Sort, Merge Sort, Heap Sort, Radix Sort, Bucket Sort, Shell Sort, Graphs:		
Quick Sort, Merge Sort, Heap Sort, Radix Sort, Bucket Sort, Shell Sort, Graphs: Representation (Matrix and Linked), Traversals, Shortest path, Topological sort. Dijkstra's

Object Oriented Programming with C++	
Course Code: MCA-104	Credits: 5
Contact Hours: L-3 T-0 P-4	Semester: 2
Course Category: DCC	

Introduction:

This course provides in-depth coverage of object-oriented programming principles and techniques. Topics include classes, objects, overloading, data abstraction, information hiding, encapsulation, inheritance, polymorphism, file processing, templates, exceptions, container classes etc. The course material embraces the C++ language standard with numerous examples demonstrating the benefits of C++. In the end some basics of Java will be covered.

Course Objective:

To learn object-oriented programming (OOP) principles and get a flavour of modular programming

Pre-requisite: Basics of C Programming

Course Outcomes:

CO1: Distinguish between the various programming paradigms available and understand the basic syntax of object-oriented programming.

CO2: Build the classes and apply the various features of the language.

CO3: Able to develop programs with reusability.

CO4: Implement programme using namespace, templates, exception handling and file I/O to improve effective programming skills.

Pedagogy: Emphasis on lab sessions where students will be given programming assignments to code in C++/Python/Java based on topics learnt in previous lectures.

UNIT-I	10 Hours	
Need for Object Oriented Programming, Comparison of Programmi	ng paradigms,	
Characteristics of Object-Oriented Programming Languages, Introduc	tion to Object	
Oriented concepts (classes, objects, encapsulation, inheritance, data hiding, abstraction,		
polymorphism), Fundamentals Data Types & Literals Variables, Arrays, Operators,		
Control of Flow in OOP, Compilation and Execution of Process, Refere	nce vs. Pointer	
variable, Classes and Objects: class declaration, Role of private, public	and protected	
access specifiers, Memory organization of class, inline function, friend	function, static	
members, constructor and destructors, instantiation of objects, default pa	arameter value,	
object types		
UNIT-II	11 Hours	
Garbage collection, dynamic memory allocation, new and delete operator	Polymorphism:	
Function overloading, Constructor overloading, Compile time	polymorphism,	
Overloading Rules, Operator Overloading (Unary and Binary) as member	function/friend	
function. Inheritance, Types of Inheritance, Use of protected access specifi	ier, Virtual base	
class, Ambiguity resolution using scope resolution operator and Virtu	al base class,	
Overriding inheritance methods, Constructors and Destructor in derived cl	lasses, Runtime	
polymorphism,	r	
UNIT-III	11 Hours	
Pointer to objects, Virtual Functions (concept of virtual table), pure vir	rtual functions,	
Abstract Class, Managing Input/ Output, Concept of streams, console I/O -	-formatted and	
unformatted, Manipulators, File I/O – Predefined classes, file opening	& closing, file	
manipulation, read & write operations, sequential and random file acc	ess, Exception	
Handling: Basic mechanism, Throwing, Catching and Re-throwing. Nai	nespace: Basic	
concept, role of scope resolution operator and using keyword	40.77	
UNIT-IV	10 Hours	
Introduction to Java- Overview and characteristics of Java, Data types, C	Drganization of	
the Java Virtual Machine, Compilation and Execution Process in java	, Java Classes,	
Packages and interfaces, Case Studies using C++ to build highly exten	sible software:	
System Sort, Apache Traffic Server, Apache Open Office Document St	inte

Software Engineering		
Course Code: MCA-106	Credits: 4	
Contact Hours: L-3 T-0 P-2	Semester: 2	
Course Category: DCC		

Introduction

This course introduces students to the different software development lifecycle (SDLC) phases used in developing, delivering, and maintaining software products. Students will also acquire basic software development skills and understand common terminology used in the software engineering profession. The aim of the course is to provide an understanding of the working knowledge of the techniques for estimation, design, testing and quality management of software development projects.

Course Objectives:

- To introduce the concepts of software engineering, software processes and its models.
- To understand the software requirements analysis, transform the requirements using DFD, create software requirement specification document and validation of the software requirements.
- To understand fundamental of software design, software quality and software maintenance.
- To understand the project planning process, size and cost estimation techniques for development of software.

Pre-requisite: Basic knowledge of Programming Languages

Course Outcomes:

CO1: Understand the concepts of Software engineering, Software process and its models.

CO2: Evaluate the Software Requirements Specification, Interpret and Create Software Requirements Specification Document.

CO3: Apply appropriate software architectures and patterns to carry out high level design of a system and be able to critically compare alternative choices, evaluate the quality and maintenance of the software through software testing.

CO4: Create the software project plan for size and cost estimation including risk analysis.

Pedagogy: This course is structured around continuous progress. It will include a combination of lectures, and group activities focused on experiential learning, in-class discussions, regular assessments and case studies. The topics will be presented to students using real-world scenarios and problem-solving activities.

UNIT-I 10 Hours		
Introduction: Software Crisis, Software Processes & Characteristics, Software life cycle		
models, Waterfall, Prototype, Evolutionary and Spiral Models.		
Software Requirements analysis & specifications: Requirement engineering, requirement		
elicitation techniques like FAST, QFD & Use case approach, requirements analysis using		
DFD, Data dictionaries & ER Diagrams, Requirements documentation, Nature of SRS,		
Characteristics & organization of SRS, Requirement Management, IEEE Std. for SRS.		
UNIT-II 11 Hours		
Software Project Planning: Size Estimation like lines of Code & Function Count, Cost		
Estimation Models, COCOMO, Putnam resource allocation model, Validating Software		
Estimates, Risk Management.		
Software Design: Cohesion & Coupling, Classification of Cohesiveness & Coupling,		
Function Oriented Design, Object Oriented Design.		
UNIT-III 11 Hours		
Software Metrics: Software measurements: What & Why, Token Count, Halstead Software		
Science Measures, Data Structure Metrics, Information Flow Metrics.		
Software Reliability: Importance, Hardware Reliability & Software Reliability, Failure and		
Faults, Reliability Models- Basic Model, Logarithmic Poisson Model, Software Quality		
Models, CMM & ISO 9001.		
UNIT-IV 10 Hours		
Software Testing: Testing process, Design of test cases, Introduction to functional testing &		
Structural testing, Unit Testing, Integration and System Testing, Debugging, Alpha & Beta		
Testing.		
Software Maintenance: Management of Maintenance, Maintenance Process, Maintenance		
Models, Regression Testing, Reverse Engineering, Software Re-engineering, Configuration		
Management, Documentation.		
Text Books

Operating Systems		
Course Code: MCA-108	Credits: 4	
Contact Hours: L-3 T-0 P-2	Semester: 2	
Course Category: DCC		

Introduction

This course aims at introducing classical internal algorithms and structures of modern operating systems including CPU scheduling, memory management, and device management. Topics including file systems, virtual memory, disk scheduling, concurrent processes, deadlocks, security, and integrity will be covered.

Course Objectives

- To learn the fundamentals of Operating Systems.
- To learn the mechanisms of OS to handle processes and threads and their communication.
- To learn the mechanisms involved in memory management in contemporary OS.
- To gain knowledge on OS architecture, mutual exclusion algorithms, deadlock detection algorithms etc.
- To know the components and management aspects of concurrency management.

Pre-requisite: Analysis of algorithms, algorithm design techniques, programming knowledge in C, C++ or JAVA.

Course Outcome:

CO1: To understand various types of OS, basic concepts, various functions of different OS, process management & CPU scheduling.

CO2: To compare and contrast various memory management schemes like paging, segmentation and to apply different deadlock handling algorithms.

CO3: To implement different disk scheduling algorithms, to apply and use various process synchronization techniques and device management strategies.

CO4: To understand management of I/O and different file handling & directory implementation schemes in OS.

Pedagogy: The class will be taught using theory and tutorial-based methods which includes board teaching and presentations/slides, discussions, case studies etc. Along with classroom teaching, students will also be given assignments regarding the topics covered. The course instructor will demonstrate and explain about applications of Operating Systems techniques with real-time examples.

	UNIT-I	10 Hours	
Intro	duction: Definition, Role, Types of Operating System, Batch System	stems, multi	
progra	programming, time-sharing, parallel, distributed and real-time systems, Operating system		
struct	structure, Operating system components and services, System calls, System programs, Virtual		
mach	machines.		
Proce	Processes: Process Concept, Process Scheduling, Operation on Processes, Cooperating		
Proce	Processes, Threads.		
CPU	CPU Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms, Multiple		
Proce	ssor Scheduling, Real-Time Scheduling.		
	UNIT-II	11 Hours	
Inter	process Communication and Synchronization: Background, The Crit	itical-Section	
Proble	em, Synchronization Hardware, Semaphores, Classical Problems of Syn	chronization,	
Critic	al Regions, Monitors, Message Passing.		
Dead	locks: System Model, Deadlock Characterization, Methods for Handlin	g Deadlocks,	
Dead	ock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from	m Deadlock.	
Mem	ory Management: Background, Logical vs. Physical Address space	e, swapping,	
Conti	guous allocation, Paging, Segmentation, Segmentation with Paging.		
	UNIT-III	11 Hours	
Virtu	al Memory: Demand Paging and its performance, Page-replacement	Algorithms,	
Alloc	ation of Frames, Thrashing, page size and other Considerations, Demand S	legmentation.	
Devic	e Management: Techniques for Device Management, Dedicated Dev	vices, Shared	
Devic	es, Virtual Devices, Independent Device Operation, Buffering, Devic	e Allocation	
Consi	deration	~	
Secon	dary-Storage Structure: Disk Structure, Disk Scheduling, Disk Manag	ement, Swap	
Space	Management, Disk Reliability.	40.77	
	UNIT-IV	10 Hours	
File-S	ystem Interface: File Concept, Access Methods, Directory Structure.		
File-System Implementation: Introduction, File-System Structure, Basic File System,			
Allocation Methods, Free-Space Management, Directory Implementation.			
Security: The Security problem, Goals of protection, Access matrix, Authentication, Program			
threats, System threats, Intrusion detection.

Human Values and Professional Ethics	
Course Code: HMC-102	Credits: 3
Contact Hours: L-3 T-0 P-0	Semester: 2
Course Category: HMC	

Introduction: Values and Ethics are very relevant in today's environment of conflicts and stress in every profession, with obligations to be met by one person in many directions. A formal study will certainly improve one's ability and judgment and refine one's behaviour, decisions, and actions in performing the duty to the family, organization, and to the society.

Course Objectives:

- To facilitate the development of a Holistic perspective among students towards life, profession and happiness, based on a correct understanding of the Human reality and the rest of Existence. Such a holistic perspective forms the basis of Value based living in a natural way.
- To inculcate Ethics and Human Values into the young minds and develop moral responsibility and mould them as best professional which will create ethical vision and achieve harmony in life.

Prerequisite: None

Course Outcomes:

Having successfully completed this course, the student will be able to

CO1: Develop the capability of shaping themselves into outstanding personalities through a value-based life.

CO2: turn themselves into champions of their lives.

CO3: take things positively, convert everything into happiness, and contribute to the happiness of others.

CO4: become potential sources for contributing to the development of the society around them institutions/organizations they work in.

Pedagogy: The learning and teaching methods include the use of weekly three-hour lectures to illustrate the subject and provide examples of the practical application of such topics. Lecture materials will be supported by directed reading and assignments.

Design And Analysis of Algorithms

Course Code: MCA-201 Contact Hours: L-3 T-0 P-2 Course Category: DCC Credits: 4 Semester 3

Introduction: Algorithms play a crucial and fundamental role in computer science. Given that algorithms are present in all domains of computer science, it is important for students to learn techniques to analysis a given algorithm. In addition, different approaches to design algorithms are important to write one's own algorithm.

Course Objectives:

- Introduction, learning and analysis of performances of algorithmic efficiency of approaches such as searching, sorting etc.
- Introduction, learning and analysis of greedy paradigms.
- Introduction, learning and analysis of dynamic programming and back tracking.
- Introduction, learning and analysis of computational complexity and branch & bound.

Pre-requisites: Knowledge of data structures and programming

Course Outcomes:

CO1: Understand asymptotic complexities of the algorithms and design algorithms using Divide and Conquer strategy.

CO2: Apply greedy and dynamic programming approaches for designing algorithms.

CO3: Implement various graph algorithms and design algorithms using backtracking approach and branch and bound techniques

CO4: Implement different string-matching algorithms and understand the concept of NP-complete problems.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web-based resources as well as flipped class room teaching will be adopted.

UNIT – I

Introduction to Algorithms: Need for algorithm, Growth of Functions, Exercises based on Asymptotic Notations, Solving Recurrence Relations – Iterative method, Substitution method & Master method. Space vs Time Complexity Tradeoff.

Divide and Conquer Technique: Merge Sort, Quick Sort, Median and Order Statistics, Maximumsubarray Problem, Strassen's Matrix Multiplication.

UNIT – II

10hrs

10hrs

Dynamic Programming: Elements of Dynamic Programming, Matrix Chain Multiplication, Longest Common Subsequence, 0/1 Knapsack and Optimal Binary Search Tree problems.

Greedy Algorithms: Elements of Greedy strategy, Activity Selection problem, Huffman Codes, 0/1 Fractional Knapsack, Task Scheduling problem.

UNIT – III

Graph Algorithms: Representation of Graphs, Breadth First Search, Depth First Search, Topological Sort, Strongly Connected Components, Algorithm for Kruskal's and Prim's for finding Minimum cost Spanning Trees, Dijkstra's and Bellman Fort Algorithm for finding Single source shortest paths. All pair shortest paths and matrix multiplication, Floyd – Warshall algorithm for all pair shortest paths.

UNIT - IV

String Matching: The naïve String-Matching algorithm, The Rabin-Karp Algorithm, String Matching with finite automata, The Knuth-Morris Pratt algorithm.**NP-Completeness:** Polynomial-time verification, NP-Completeness and Reducibility, NP- Completeness Proof, NP-Complete problems.

Cloud Computing

Course Code: MCA-203		
Contact Hours : L-3	T-0	P-2
Course Category: DO	CC	

Credits: 4 Semester: 3

Introduction: Cloud computing is a scalable service provider platform that provides on-demand and pay per use computing service for various types of shared pool of resources such as memory, servers, storage, networking, software, database, applications designing etc., with the help of the internet. This course will introduce various aspects of cloud computing including fundamentals of cloud computing, load balancing techniques, security challenges, case studies and industrial applications of cloud computing. This will help students to use and explore the cloud computing platforms.

Course Objectives:

- To learn the use of various cloud computing services and cloud deployment models.
- Understand the concept of virtualization in cloud computing.
- To apply the concepts of cloud computing for designing, evaluating, simulating and comparing various applications in a cloud computing environment.
- To gain the confidence in resource management and load balancing algorithms in a cloud computing environment.
- To gain the confidence of security attacks and their provisions at various levels of cloud computing.

Prerequisite: Basic understanding of Operating System.

Course Outcomes:

CO1: To articulate key concepts of cloud computing and computing techniques, strength and limitations of cloud computing with possible application domains.

CO2: To identify the architecture and infrastructure of cloud computing including SaaS, PaaS, IaaS, public cloud, private cloud and hybrid cloud.

CO3: To interpret various data, scalability and cloud services to acquire efficient database for cloud storage.

CO4: To explain the core issues of cloud computing such as security, privacy and interoperability and deal with controlling mechanism for accessing sage cloud service.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web-based resources as well as flipped class room teaching will be adopted.

UNIT – I

Introduction: Introduction of cloud computing, History of cloud computing, NIST definition, properties and characteristics, Cloud as green and smart, Cloud as IaaS, PaaS, Saas, BPaaS, HaaS, Public, Private, Hybrid and community cloud, Benefits and Challenges, Application availability, performance, security and disaster recovery; next generation Cloud Applications, Technology providers vs. Cloud providers vs. Cloud vendors .

UNIT - II

10hrs

10hrs

Cloud Architecture: Virtualization concept, cloud building blocks, ROI Model, Service models, deployment models, storage models, security model. **Introduction to IaaS:** Resource Virtualization, Server, Storage, Network **Introduction to PaaS:** Cloud platform & Management, Computation, Storage. **Introduction to SaaS:** Web services, Web 2.0, Web OS. **Cloud Storage Infrastructure:** Storage strategy and governance; security and regulations Storage Network Design: Architecture of storage, analysis and planning. Storage network design considerations, Cloud Optimized Storage, Designing backup/recovery solutions

UNIT – III

10hrs

10hrs

Cloud issues and challenges: Cloud provider Lock-in, Security challenges and approaches (Infrastructure security, Network level security, Host level security, Application-level security, Data security and Storage, Data privacy and security Issues, Jurisdictional issues raised by Data location, Identity & Access Management, Access Control, Trust, Reputation, Risk Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations.

UNIT – IV

Application Development: Service creation environments to develop cloud-based applications, Development environments for service development; Amazon, Azure, Google App, Salesforce.com, IBM Cloud, Google MapReduce, Yahoo Hadoop, Eucalyptus, Nimbus, OpenStack.

TEXT BOOKS:

1. Barrie Sosinsky, "Cloud Computing Bible", Wiley-India 1st edition, 2011

Database Management System	
Course Code: MCA-205	Credits 4
Contact Hours: L-3 T-0 P-2	Semester 3
Course Category: DCC	

Introduction: Database Management System (DBMS) is used for creating and managing the databases. The main aim of a DBMS is to supply a way to store-up and retrieve the desired database information as per the application requirement, which is both convenient and efficient.

Course Objectives:

- Describe the fundamental elements of relational database management systems, relational data model, entity-relationship model, relational database design, relational algebra and SQL.
- To design relational databases by applying normalization techniques to normalize the database.
- Strong practice in SQL programming through a variety of database problems.
- Understand the needs of database processing and learn techniques for controlling the consequences of concurrent data access.

Pre-requisites: Basic concepts of set theory

Course Outcomes:

CO1: To have a high-level understanding of major DBMS components and their functions.

CO2: To model an application's data requirements using conceptual modeling tools like ER diagrams and design database schemas based on the conceptual model.

CO3: To develop structured query language (SQL) queries to create, read, update, and delete relational database data.

CO4: To understand the concept of Transaction, concurrency and Query processing.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web-based resources as well as flipped class room teaching will be adopted.

UNIT I	10 hrs
Introduction: Database system concepts and its architecture, Data models s	chema and instances,
Data independence and database language and interface, Data definition lang	uages, DML. Overall
database structure.	
Data modeling using Entity Relationship Model: ER model concept, nota	tion for ER diagrams
mapping constraints, Keys, Concept of super key, candidate key, primary	key generalizations,
Aggregation, reducing ER diagrams to tables, extended ER model.	
Relational Data Model and Language: Relational data model concepts, inte	grity constraints, Keys
domain constraints, referential integrity, assertions, triggers, foreign key.	
UNIT II	12 hrs
Relational algebra, relational calculus, SQL Queries, SQL Functions, No.	ested Queries, Joins,
Advanced Queries, Views, Indexing, Sequence, Grant and Revoke, Materializ	ed View, Introduction
to PL/SQL	
UNIT III	10 hrs
Data Base Design: Functional dependencies, normal forms, 1NF, 2NF, 3N	VF and BCNF, multi-
valued dependencies fourth normal form, join dependencies and fifth no	rmal form. Inclusion
dependencies, lossless join decompositions, normalization using FD), MVD and JDs,
Denormalization.	, , ,
UNIT IV	10 hrs
Transaction processing concepts: Transaction processing system, schedul	le and recoverability.
Testing of serializability, Serializability of schedules, conflict & view serializab	ble schedule, recovery
from transaction failures, deadlock handling.	
Concurrency Control Techniques: Locking Techniques for concurrency	ontrol, time stamping
protocols for concurrency control, concurrency control in distributed systems. Multiple granularities	
and multi-version schemes.	1 0

Web Technologies

Course Code: MCA-207
Contact Hours: L-3 T-0 P-2
Course Category: DCC

Credits 4 Semester 3

Introduction: This course aims at introducing the fundamental of internet and concepts of web technology.

Course Objectives:

- To understand the basics of Internet and the Web phenomena.
- To create the web pages and essential areas of developing the website.
- To introduce PHP language for server-side scripting
- To introduce XML and processing of XML Data
- To introduce Client-side scripting with Javascript and AJAX

Pre-requisites: Basic knowledge of programming.

Course Outcome:

CO1: Understand the basic terminology of web and to implement CSS and HTML in web development.

CO2: Design and Explain the basic concept of XML and Create XML documents and Schema.

CO3: Develop web-based application using suitable client side and server-side web technologies

CO4: Develop a web-based portal to provide requisite services to the users.

Pedagogy: Students will design web pages using static and dynamic pages, with the introduction on clientside and server-side programming. Emphasis on developing web applications. The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web-based resources as well as flipped class room teaching will be adopted.

UNIT-I	10 hrs
Web Basics- Introduction, Concept of Internet- History of Internet, Wor	ld Wide Web, URL,
Understanding websites and Web Server, Web Browser.	
Introduction to HTML: HTML overview, Basics of HTML Document, HTML	tags, HTML Elements
HTML Attributes, Tables, Frames, Creating Forms, Images, Multimedia, Links,	Application of HTML
HTML examples	
Separating style from structure with style sheets: Inline style specificat specifications within html, external linked style specification using CSS.	ion and internal style
UNIT-II	10hrs
Introduction to XML: XML vs. HTML, uses of xml, simple xml, xml key	components, DTD and
schemas, well formed, XML trees, XML Namespace, XML examples, using xml and XSLT. Introduction to XSL, XML transformed simple example, XSL eleme XSLT	with application, XSI ents, transforming with
Client-side programming: Introduction to JavaScript, JavaScript programming conditions, loops, JavaScript object model, event handling, forms handling, of images, applications.	ig, variables, functions cookies, hidden fields
UNIT-III	10 hrs
etc., Handling File Uploads, Connecting to database (MySQL asreference), ex handling results, Handling sessions and cookies File Handling in PHP: File of closing, reading, writing, appending, deleting etc. on text and binary files, listin	ecuting simple queries perations like opening ng directories
UNIT-IV	10 hrs
Introduction to AJAX: Introduction, AJAX Database, Working of AJAX Database Form, AJAX PHP MySQL Select Query Web services: components and working of web services, web services architeservice-oriented architecture, overview of web analytics and web mining	with PHP, Ajax PHI tecture, introduction to
Text Books

General Elective Course		
Course Code: GEC-201		Credits 2
Contact Hours: L-0 T-0	P-4	Semester 3
Course Category: GEC		

Introduction: A Generic Elective (GE) course is an inter-disciplinary course provided to the students chosen generally from an unrelated discipline/subject and allowing them a chance at comprehensive education. GEs are introduced as part of the CBCS. The students can choose their preference from a pool of courses from various disciplines/subjects. Elective courses do much more than filling in the gaps to fulfill the high school graduation requirements. It gives a chance to explore new options, allowing students to study more about the subject they are passionate about, and enables them to 'test drive' new activities. They provide students with the necessary skills to improve creativity that they might not find in the classroom. The main purpose of the elective course is to seek exposure to a new discipline/subject and to provide the students with an alternative option for desired fields.

Course objectives:

- Students will have exposure to a new discipline/subject.
- Prepare students to look for inter-disciplinary research.
- Fulfill the limitation to pursue master's study in desired field.
- Help discover new things that never existed and might change the course of student's life.

Prerequisite: Basic knowledge of the selected domain of elective course

Course Outcomes: After completion of the elective course, the students will be able to:

CO1: Identify new discipline and learn new subject for future careers.

CO2: Apply their knowledge to understand and solve the real-life problems.

CO3: Analyse creative design process through the integration and application of diverse technical knowledge and expertise to address social issues.

CO4: Develop the habit of working independently to attain self-motivation, discipline, and confidence to achieve their goals.

Industrial Training/Internship	
Course Code: MCA 253	Credits 1
Contact Hours:- Course Category: DCC	Semester 3

Introduction: Students will carry on the industrial training/internship for at least six weeks in the summer break of previous academic session. The idea of the training is to make them capable of handling the implementation of their theoretical knowledge in the practical field. To facilitate the development of a holistic perspective among students towards life, industry experts teach advanced technologies. Through Industrial training, students get familiarize with the environment of an organization and a company. Students get a certificate which validates their skills and helps them in getting a job quickly. The assessment for the same will be done within the first two weeks of opening of academic session by the respective department.

Course Outcomes

CO1: Understand the Organizational Structure of a company.

CO2: Develop work habits and attitudes necessary for job success (technical competence, professional attitude, organization skills etc.)

CO3: Develop written communication and technical report writing skills.

CO4: Develop an awareness for the need and applications of standards in the industry.

Java Programming

Course Code: MCA-202 Contact Hours: L-3 T-0 P-2 Course Category: MCA Credits 4 Semester 4

Introduction: Java Programming is one of the most widely used programming language among developers and are preferred over other languages. This course introduces students to object-oriented design methods and GUI like Applet, swing, AWT etc. The objective is to provide students with the use of the Java programming language for writing complex and stand-alone applications at the Intermediate level.

Course Objectives

- To provide knowledge of Object-Oriented programming features and fundamentals of program development using java.
- Students will learn how to write, test, and debug Object-Oriented programs using Java and learn advanced concepts.

Pre-requisites: The student may have experience in a high-level programming language such as C/C++.

Course Outcome: After completion of course, students will able to:

CO1: Understand object-oriented concepts and use the concepts of inheritance, polymorphism, interfaces, packages with exception handling reusable Java programs.

CO2: Identify operations commonly used to implement thread-based applications, network-based application, file I/O operations, and exception handling

CO3: Implement simple GUI interfaces for a computer program to interact with users and understand the event handling

CO4: Understand Servlet and implement programs using JDBC

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web-based resources as well as flipped class room teaching will be adopted.

	10 hrs
Overview of java: Class Fundamentals: introduction of classes, objects and mexample, creating objects and object reference, object lifetime and garbage of String: Creating an array, one- and two-dimensional arrays, String, String Buff classes, Constructors, Class inheritance, use of super, Multilevel hierarchy, At classes, Object class Packages and interfaces: Extending Interfaces, Organizing Classes and Interfaces and Interfaces and Interfaces and Interfaces. CLASS PATH Setting for Exception Handling: Exception types, uncaught exceptions, try-catch, through the exception, Creating your own exceptions Multithreaded Programming: Life Cycle of Thread, Creating and running the synchronization, Thread communication, Thread group, Thread prioritie suspending, resuming and stopping threads.	ethods using program ollection, Arrays and fer and String Builder ostract Class and final erfaces in Packages, Packages. w, throw and finally, nread, Multiple thread, s, Daemon Thread,
UNIT-II	11 hrs
Maps & Sets, Wrappers classes Networking(java.net): Networking concepts, using java.net package, networking classes and interfaces, socket programming, TCP/IP client and server sockets RMI (Remote Method Invocation): Introduction, Steps in creating a Remote Object, Generating Stub & Skeleton, RMI Architecture, RMI packages Input/Output Programming and file operations(java.io): Java.io, Byte and Character Stream predefined streams. Reading and writing from console and files	
UNIT-III	10 hrs
Applet, Event handling and AWT: Applet design, parameters to applets, Even Machanism, the Delegation Event Model, Event Classes, Event Listener, Inte	t Handling: Different
handling, Adapter and Inner Classes, AWT packages, Components and Cor controls, Layout managers, AWT components, Adding menu to window Swing: Introduction to JFC (Java Foundation Classes), Features of Swing a AWT, Advanced Control in swing (JTree and JTable)	erfaces, Applet event atainers, using AWT nd Comparison with

Artificial Intelligence

Course Code: MCA-204 Contact Hours: L-3 T-0 P-2 Course Category: DCC Credits 4 Semester 4

Introduction: "AI is the new electricity" -Andrew Ng. This course aims to give the fundamental knowledge and practical skills needed to design, build, and apply AI systems in one's chosen area of specialization. This course is an introduction to the basic Knowledge representation, problem solving and learning methods of artificial intelligence. After learning this course, the student should be able to understand the basic concepts of problem solving and learning in intelligent system engineering.

Course Objectives:

- To learn the meaning behind common AI terminology
- To understand what AI realistically can--and cannot—do
- To spot opportunities to apply AI to problems in your own organization

Course Outcomes: On successful completion of this course, the students should be able to:

- CO1: Understand basic terminology of modern AI frameworks.
- CO2: Understand, and implement problem solving agents in AI.
- CO3: Learn to understand decision making systems.
- CO4: Understand and apply learning-based agents.

Pedagogy: Students will analyse and design AI applications in Python using hands-on, engaging activities. At the end of each Unit, example application/case study will be discussed and relevant research paper reading will be carried out.

UNIT-I	8 hrs
AI terminology, data, workflow of a data science project, what makes a company good at AI, Bias ir AI, adversarial attacks on AI, AI application areas, tools and techniques, what AI can and cannot do, AI and developing economies, AI team and job functions, case studies: smart speaker and self-driving ca	
UNIT-II	12 hrs
Search: Formalism, BFS, DFS, Uninformed Search, A* and Heuristics, Adversarial Search, CSP: Constraint Satisfaction, Local Search, and Optimization, Logic: Ontology, Propositional Logic, First order predicate logic, resolution, fuzzy logic, case study: restaurant tip planner	
UNIT-III	12 hrs
Uncertainty, Probabilistic Reasoning Systems, Making Simple Decisions, Making Complex Decisions, Markov Decision Processes: Bayesian Networks: Representation, Independence, Inference, Markov Models, Hidden Markov Models, case study: search string completion	
UNIT-IV	10 hrs
Learning: Learning from Observations, inductive learning, active learning, decision trees, statistical learning: learning with complete data (naïve Bayes), instance-based learning (nearest neighbour), learning with hidden variables (clustering), learning in Neural and Belief Networks, Reinforcement Learning, case study: malware detection

Data Communications and Computer Networks

Course Code: MCA-206 Contact Hours: L-3 T-0 P-2 Course Category: DCC Credits 4 Semester 4

Introduction: Data communications refers to the transmission of this digital data between two or more computers and a computer network or data network is a telecommunications network that allows computers to exchange data. The physical connection between networked computing devices is established using either cable media or wireless media. The best-known computer network is the Internet.

Course Objectives:

- The students should understand the layers of networking devices.
- They should be familiar with a few networking protocols.
- They should study the different types of networks and topologies of networks.

Pre-requisite: Data Structures and Algorithms

Course Outcomes:

CO1: Describe the fundamental concepts and layered architecture of computer networking.

CO2: Explain the basic concepts of link layer properties to detect error and develop the solution for error control and flow control. Design, calculate, and apply subnet masks and addresses to fulfill networking requirements. Also, compare various routing protocols.

CO3: Comprehend the duties of transport layer and congestion control techniques.

CO4: Illustrate the features and operations of various application layer protocols such as DNS, HTTP, FTP, e-mail protocols and other applications; and focus on network security issues to secure communication towards society.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Students would be encouraged to develop an understanding of the existing real life cyber security issues and how they are solved. Emphasis would be given on assignments where students will be given numerical/ programming assignments based on topics studied in previous lectures. Course will have a blend of theory and practice for the benefit of students. Use of ICT, web-based sources as well as blackboard teaching will be adopted.

UNIT-I	10 hrs	
Introduction: Goals and Applications of Networks, Layering Concept, OSI Reference Model, TCP/IP		
Protocol Suite, Networks Topology, Physical Layer: Signals, Digital Transmission - Analog to		
Digital & Digital to Digital, Analog Transmission – Digital to Analog &	k Analog to Analog,	
Multiplexing – FDM & TDM, Media – Guided and Unguided, Switching – P	acket based & Circuit	
based, Shannon Capacity; Network Topologies, Connecting Devices		
UNIT -II	11 hrs	
Data Link Layer: Addressing, Error Detection & Correction, Checksum & C	CRC; Medium Access	
– ALOHA, CSMA, CSMA/CD & CA; Protocols – Ethernet, ARP & RARP; S	Switching Techniques.	
Network Layer: Need for internetworking, IP Addressing, Subnetting, Super	netting, Basic Routing	
(or Forwarding) Mechanism; IPv4 frame format and functions; Key features of	of IPv6, ICMP, IGMP,	
Routing protocols – RIP, OSPF & BGP and algorithms – Distance Vector a	and Link State. Linux	
Network Commands: arp, route, ifconfig, netstat, traceroute, ping.		
UNIT-III	11 hrs	
Transport Layer: Port Addresses; ARQ - Simple, Stop and Wait, Go Back	-N, Selective Repeat;	
UDP – Services & Applications; TCP – header format, connection setup & termination, state		
transition diagram, flow control, error control, Congestion Control: causes for	congestion, effects of	
congestion, various open-loop and close-loop congestion control technique	es: The leaky bucket	
algorithm, The token bucket algorithm		
UNIT -IV	10 hrs	
Application Layer: Web & HTTP, FTP, Email, Telnet, SSH, DNS, RPC.		
Advanced Protocols: SNMP, RTP, SIP, BitTorrent.

Software Testing		
Course Code: MCA-301	Credits: 4	
Contact Hours: L-3 T-0 P-2	Semester: 5	
Course Category: DCC		

Introduction: Software testing is a course based on knowledge dissemination of investigating software's to ensure that its quality under test is in line with the requirements of the client. This course will introduce the students to a number of techniques to design and analyze test cases, teach them how software testing is carried out in a systematic manner with the intent of finding defects and evaluating the systems. It helps students in solving computational problems across a variety of areas in testing software.

Course Objective:

- To understand that software testing is a fundamental part of the software life cycle.
- To learn the essential theories, types, tools, and methods of software testing
- To learn about various software testing problems.

Course Outcomes:

CO1: Understand the fundamental concepts of a testing.

CO2: Derive test cases using black box and white box testing strategies.

CO3: Generate and prioritize test cases to prove the correctness of program and understand levels of testing and object-oriented testing and web testing

CO4: Understand verification methods, verification of documents, testing metrics and quality models to improve the quality of software.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web- based resources as well as flipped classroom teaching will be adopted.

UNIT I	10 hours
Introduction: Testing Objectives, Software Testing Process, Software Testing Principles, Tester Role in Software Development Organization, Test Case Implementation and Execution. Testing Concepts: Levels of Testing, Test Cases Design and Strategy, Test Suit, Test Plan, testing as a Process, Testing and Debugging, Limitations of Testing. Software Testing Tools: Characteristics of Modern Tools, Static Testing Tools, Dynamic Testing Tools, Process Management Tools.	
UNIT II	10 hours
Functional Testing: Boundary Value Analysis, Robustness Testing, Wo Value Testing, Equivalence Class, Testing-Weak Normal, Strong Normal Robust, Decision Table Based Testing, Cause Effect Graphing Technique. S Flow Testing-Statement, Branch, Condition and Path Coverage, Data Flow Generation of Test Cases, Slice-Based Testing, Mutation Testing, Integrati Based Integration, Call Graph Based Integration, System Testing: Thread	orst Case Testing, Special I, Weak Robust and Strong Structural Testing: Control Testing, Testing Strategies, ion Testing, Decomposition Testing.
UNIT III	10 hours
Introduction to Object Oriented Testing, State Based Testing, Class Testin Object Oriented Testing, Regression testing, Selection of test cases, Reduci Prioritization guidelines.	ng, Web Testing, Issues in ing the number of test cases,
UNIT IV	10 hours
Software Verification Methods, SRS Verification, SDD Verification, Sour Project Audit, Debugging Process and Approaches, Software Testing Metri Software Quality and Quality Models.	ce Code Reviews, Software ics, Metrics used in Testing,

General Elective Course		
Course Code: GEC-301	Credits 2	
Contact Hours: L-0 T-0 P-4	Semester 5	
Course Category: GEC		

Introduction: A Generic Elective (GE) course is an inter-disciplinary course provided to the students chosen generally from an unrelated discipline/subject and allowing them a chance at comprehensive education. GEs are introduced as part of the CBCS. The students can choose their preference from a pool of courses from various disciplines/subjects. Elective courses do much more than filling in the gaps to fulfill the high school graduation requirements. It gives a chance to explore new options, allowing students to study more about the subject they are passionate about, and enables them to 'test drive' new activities. They provide students with the necessary skills to improve creativity that they might not find in the classroom. The main purpose of the elective course is to seek exposure to a new discipline/subject and to provide the students with an alternative option for desired fields.

Course objectives:

- Students will have exposure to a new discipline/subject.
- Prepare students to look for inter-disciplinary research.
- Fulfill the limitation to pursue master's study in desired field.
- Help discover new things that never existed and might change the course of student's life.

Prerequisite: Basic knowledge of the selected domain of elective course

Course Outcomes: After completion of the elective course, the students will be able to:

CO1: Identify new discipline and learn new subject for future careers.

CO2: Apply their knowledge to understand and solve the real-life problems.

CO3: Analyse creative design process through the integration and application of diverse technical knowledge and expertise to address social issues.

CO4: Develop the habit of working independently to attain self-motivation, discipline, and confidence to achieve their goals.

Industrial Training/Internship		
Course Code: MCA 353	Credits 1	
Course Category: DCC	Semester 5	

Introduction: Students will carry on the industrial training/internship for at least six weeks in the summer break of the previous academic session. The idea of the training is to make them capable of handling the implementation of their theoretical knowledge in the practical field. To facilitate the development of a holistic perspective among students towards life, industry experts teach advanced technologies. Through Industrial training, students get familiarized with the environment of an organization and a company. Students get a certificate which validates their skills and helps them in getting a job quickly. The assessment for the same will be done within the first two weeks of opening of academic session by the respective department.

Course Outcomes

CO1: Understand the Organizational Structure of a company.

CO2: Develop work habits and attitudes necessary for job success (technical competence, professional attitude, organization skills etc.)

CO3: Develop written communication and technical report writing skills.

CO4: Develop an awareness for the need and applications of standards in the industry.

Computer Graphics and Multimedia Technologies

Course Code: MCA-208 Contact Hours: L-3 T-0 P-2 Course Category: DCC Credits 4 Semester 4

Introduction: Computer graphics is an art of drawing pictures, lines, charts, etc. using computers with the help of programming. Computer graphics is made up of number of pixels. Pixel is the smallest graphical picture or unit represented on the computer screen. In this course, students will learn fundamental concept and algorithms of computer graphics and multimedia.

Course Objectives:

- To learn the fundamental concepts of graphics and multimedia.
- To gain and apply the acquired knowledge pertaining to 2D and 3D concepts in graphics programming.
- To understand the basic 3D modelling and rendering techniques.
- To realize the importance of multimedia towards building the virtual environment and communication.

Pre-requisites: Nil

Course Outcomes: Upon successful completion of the course, students will be able to:

CO1: Enumerate the functionalities of pixels and coordinate systems pertaining to graphics manipulation.

CO2: Design and demonstrate the 2D and 3D objects using graphics algorithms.

CO3: Have the ability to model and render 3D objects by comprehending the complexities of illumination in virtual scenes.

CO4: Appraise and interpret the various multimedia communication standards, applications and basic principles.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web-based resources as well as flipped class room teaching will be adopted.

UNIT I 10 hrs		
Scan Conversion Algorithms: Scan Converting Lines (DDA, Bresenham), Scan Converting Circles		
(Mid-point, Bresenham), Scan Converting Ellipses (Midpoint). Clipping: Two-Dimensional		
Clipping, Sutherland-Cohen Subdivision Line-Clipping Algorithm 2D- Transformation:		
Representation of Points, Transformations and Matrix, Transformation of Straight Line, 2-D -		
Rotation, Reflection, Scaling, Combined Transformations, Translation and Homogeneous		
Coordinates, Translation, Rotation about an Arbitrary Point, Reflection through an Arbitrary Line,		
window-to-viewport transformation		
UNIT II 12 hrs		
3D-Transformation: Representation of Points, 3D- Scaling, 3D- Shearing, 3D- Rotation, Three-		
Dimensional Translation, 3D- Reflection, Multiple Transformations, Rotation about an Axis Parallel		
to a Coordinate Axis, Rotation about an Arbitrary Axis in Space. The Dimensional Perspective		
Geometry: Geometric Projection, Orthographic Projections, Oblique Projections, Perspective		
Transformations, Single-Point Perspective Transformation, Two-Point Perspective Transformation,		
Three-Point Perspective Transformation. Solid Modeling: Representing Solids, Regularized Boolean		
Set Operation primitive Instancing Sweep Representations, Boundary Representations, Spatial		
Partitioning Representations, Constructive Solid Geometry, Comparison of Representations.		
UNIT III 10 hrs		
Representing Curves & Surfaces: Polygon meshes, parametric, Cubic Curves, geometric and		
parametric continuities, Hermite, Bezier (4-point, 5-point, general), B-Spline, Quadric Surface		
Illumination and Shading: Modeling light intensities, ambient light, diffused light, specular		
reflection, attenuation factor, Reflection vector, Shading Models: constant shading, flat shading,		
gouradd shading, phong shading. Hidden-Sufface Removal: Hidden Suffaces and Lines, Back-Face		
subdivision Introduction to Multimedia: Multimedia Multimedia Terms, Introduction to making		
subdivision introduction to initialize the requirements to make good multimedia. Multimedia		
Applications		
INIT IV 10 hrs		
IV Multimedia – making it work – Multimedia Hardware, Software and Authoring Tools, Graphics		
File Formats: TIFE MIDI IPEG MPEG RTE Multimedia building blocks – Text Sound		
Images Animation and Video Digitization of Audio and Video objects Data Compression:		
Different Compression algorithms concern to text, audio, video and images etc.

Soft Computing

Course Code: MCA 210 **Contact Hours**: L-3 T-0 P-2 **Course Category**: DEC **Credits** 4 **Semester** 4

Introduction: This course aims at introducing the fundamental theory and concepts of computational intelligence methods, in particular neural networks, fuzzy systems, genetic algorithms and their applications in the area of machine intelligence.

Course Objectives:

- To provide an introduction to the basic principles, techniques, and applications of soft computing.
- To provide an understanding of the basic areas of Soft Computing including Artificial Neural Networks, Fuzzy Logic and Genetic Algorithms.
- To provide the mathematical background for carrying out the optimization associated with neural network learning.
- To develop some familiarity with current research problems and research methods in Soft Computing by working on a research or design project.

Prerequisite: Artificial Intelligence, Data Structures and Algorithms, Programming languages.

Course Outcomes: After completion of the course the students will be able to:

CO1: Understand basic concepts of neural networks.

CO2: Understand the fuzzy logic concepts.

CO3: Learn and understand genetic algorithms.

CO4: Understand the concepts of differential evolution.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web-based resources as well as flipped class room teaching will be adopted.

UNIT I	10 hrs
Introduction of soft computing, soft computing vs hard computing, various type	no in s
techniques. Bayesian Networks. Probabilistic reasoning. Neural Networks: NN	vs ANN. Learning
networks of ANN – Perceptron's - Adaline – Back Propagation, Multilayer Perce	ptron – Radial Basis
Function Networks – Unsupervised Learning Neural Networks – Competitive	Learning
Networks, Hebbian Learning.	
UNIT II	10 hrs
Fuzzy Set Theory: Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation	& fuzzy relations,
introduction & features of membership functions, Extension Principle, Fuzzy If	Then Rules, Fuzzy
Inference Systems, Sugeno Fuzzy Models, Fuzzification, Defuzzification, App	lications, Fuzzy
clustering, cluster validity measures.	10 hm
Genetic Algorithm: Difference between Traditional Algorithms and GA, The	basic operators,
Encoding Eitness Eulerion Reproduction Cross Over Mutation	and optimization.

Cyber Security and Forensics	
Course Code: MCA-212	Credits 4
Contact Hours: L-3 T-1 P-0	Semester 4
Course Category: DEC	

Introduction: Cyber Security and Forensics is the application of investigation and analysis techniques to gather and preserve evidence from a particular computing device in a way that is suitable for presentation in a court of law. This course provides for a broad introduction of cyber security and forensics concepts, industry best practices for information security and key security concepts that will protect an organization against fraud, data breaches and other vulnerabilities. It enables the students to gain in-depth knowledge in the field of Computer forensics & Cyber Crime.

Course Objectives:

- To maintain an appropriate level of awareness, knowledge and skill to allow students to minimize the occurrence and severity of information security incidents.
- To learn techniques used to detect, respond and prevent network intrusions.
- To identify and apply appropriate forensics tools to acquire, preserve and analyze system image.
- To protect information and information systems from unauthorized access, use, disclosure, disruption, modification or destruction in order to provide confidentiality, integrity and availability.
- Identify sources of evidentiary value in various evidence sources including network logs, network traffic, volatile data.

Pre-requisites: Knowledge of Computer Networking, Linux, UNIX, Understanding of Web Application Architecture and HTTP/HTTPS communication.

Course Outcomes:

CO1: Understand the fundamentals of Cyber Security and comprehend the incident response process

CO2: Demonstrate the difference between data acquisition techniques

CO3: Apply forensic analysis tools to recover important evidence for identifying cyber-crime.

CO4: Apply investigation tools and techniques for analysis of data to identify evidence related to cyber-crime and use available digital forensics tools.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Students would be encouraged to develop an understanding of the existing real life cyber security issues and how they are solved. Emphasis would be given on assignments where students will be given numerical/ programming assignments based on topics studied in previous lectures. Course will have a blend of theory and practice for the benefit of students. Use of ICT, web-based sources as well as blackboard teaching will be adopted.

UNIT-I 12	hrs
Introduction to Incident Response Process, Computer Security Incident, Goals of In	ncident response,
Who is involved in Incident response, Incidence Response Methodology, Pre-Incidence	dent preparation,
Detection of Incidents, Initial response, Formulate a response strategy, Investiga	ate the incident,
Reporting and Resolution. Computer Forensics Fundamentals, Benefits of Comp	puter Forensics,
Computer Crimes, legal concerns and private issues. Live data collection from Wi	indows systems.
Live data Collection from Unix systems.	-
UNIT-II 11	hrs
Data Acquisition of digital evidence from electronic media, Acquisition tools, Evi	dence collection
and preservation, Sources of Digital/Electronic Evidence, Computer Forensic	c Analysis and
Validating Forensics Data, System Forensics: File signatures, volatile/non-vo	olatile data, File
formats, Metadata, existing system forensics tools. Network Forensics: Fire	walls, Intrusion
Detection System. Database Forensics.	,
UNIT-III 10	hrs
Windows Forensics: malware forensics, Mobile Device Forensics: Evidence in Co	ell Phone, PDA.
Blackberry, iPhone, iPod, and MP3, Evidence in CD, DVD, Tape Drive, USB,	Flash Memory.
Digital Camera. Google Forensics: Analysis of search data/information gathered	ed from various
google services. Internet Forensics.	
UNIT-IV 10	hrs
Email Analysis: investigating email crime and violations. Messenger Analysis: AO	L. Yahoo, MSN.
and Chats Web investigation. IP tracking Server logs Domain records Curr	rent Computer
Forensics Tools: Software/Hardware Tools. An Indian perspective on digital for	ensics: Indian IT
act. Cyber laws.

Software Project Management

Course Code: MCA-214 Contact Hours: L-3 T-0 P-2 Course Categor: DEC Credits 4 Semester 4

Introduction: This course is designed to enable students to learn successful development of the software project's procedures of initiation, planning, execution, regulation and closure as well as the guidance of the project team's operations towards achieving all the agreed upon goals within the set scope, time, quality and budget standard.

Course Objectives:

- To learn Software Project management phases.
- Creating a project plan and implementing the plan to achieve the project goal.
- Learn how to plan, evaluate, and schedule components, resources, and durations of action project programs.

Pre-requisite: None

Course Outcome: Upon successful completion of this course, students will be able to:

- CO1: Understand various project contexts and management approach.
- CO2: Understand project management principles and methods in an IT project.
- CO3: Understand key phases of project management.

CO4: Determine an appropriate project management approach, project control and risk management

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web-based resources as well as flipped class room teaching will be adopted.

UNIT-1 [11]	nrs
Introduction: Introduction to software project management activities, Attributes of a project, Pr	oject
life cycle, Project Management process, Project selection, Preparing a request for proposal, Soliciting	
proposals, Proposal preparation, Pricing considerations, Proposal submission and follow up, Cust	omer
evaluation of proposals	
UNIT-II 10 I	hrs
Project Management Organizational Structures: Functional type organization, Project	type
organizations, Matrix-type organization, Project Planning - Project objective, Work breakdown stru-	cture,
Developing the network plan, Network principles, Preparing the network diagram, Critical path and	lysis,
PERT, Project Scheduling- Activity duration estimates, Project schedule calculations	,
UNIT-III 10 I	nrs
Schedule Control: Project control process, Effects of actual schedule performance, Incorpor	ating
project changes into the schedule. Updating the project schedule. Approaches to schedule control	
Resource Considerations- Resource constrained planning Planned resource utilization Resource	
leveling. Resource limited scheduling	
UNIT-IV 111	nrs
Risk Management : Risk, Categories of risk, A framework for dealing with risk. Evaluating risks t	o the
schedule. Monte Carlo simulation and critical chain concepts.	
Project Cost Planning and Performance – Project cost estimates. Project budgeting. Determinin	g the
actual cost Determining the value of work performed. Cost performance analysis. Cost forecasting	Cost
control Software project metrics. Project control and closure. Project Management Issues with reg	ard to
New Technologies Case Study & use of software project management tool	10 10

Network Security		
Course Code: MCA 305	Credits: 4	
Contact Hours: L- 3 T- 0 P-2	Semester: 5	
Course Category: DEC		

Introduction:

This course will introduce students to the basic building blocks of cryptography and applications of cryptographic protocols in real world and network security. The intent of this course is to familiarize students with security threats, cryptography, and application development in computer network protocols. The focus will be on how cryptography and its applications can maintain privacy and security in electronic communications and computer networks.

Course Objective:

- To understand the fundamentals of Cryptography.
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
- To explain and use modern cryptographic methods (symmetric encryption, public key encryption, hash functions, key management, digital signatures, certificates etc).
- To discuss various network security protocols.

Pre-requisite: None

<u>Course Outcome</u>: Upon successful completion of this course, students will be able to:

CO1: Understand applied cryptographic basics and apply to real world problems.

CO2: Select the right algorithm, protocol, and systems to develop secure systems to protect digital assets in the cyber world.

CO3: Apply the knowledge of the number theory in understanding the cryptosystems and designing the new cryptosystems with defined security requirements based on computationally hard problems.

CO4: Gain the knowledge of the algebraic structures that will enable them to work around in designing cryptosystems.

Pedagogy:

The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Students would be encouraged to develop an understanding of the existing real life network security issues and how they are solved. Emphasis would be given on assignments where students will be given numerical/ programming assignments based on topics studied in previous lectures. Course will have a blend of theory and practice for the benefit of students. Use of ICT, web based sources as well as blackboard teaching will be adopted.

	10 hours	
Introduction a	nd terminology, Conventional Cryptography: Definitions, Classical encryption	
techniques, Sul	ostitution and Transposition Cipher, Vignere Cipher, Introduction to security attacks,	
services and n	nechanism, Security Overview, CIA model, Security Policies and Mechanisms,	
Threats, Block	Ciphers and Stream Ciphers, Block ciphers principles, Shannon's theory of confusion	
and diffusion, I	Fiestal Structure, Data Encryption Standard (DES), Cryptanalysis of DES, Triple DES.	
UNIT-II	11 hours	
Group, Abeliar	and Cyclic group, Ring, Finite Fields Advanced Encryption Standard (AES), Modes	
of Encryption:	ECB, CBC, CFB, Counter mode, Message Padding, Asymmetric Cryptography:	
Number Theor	y, Modular Arithmetic, Fermat's and Euler's theorem, primarily testing, Euclid's	
Algorithm, Ch	inese Remainder theorem, discrete logarithms, public key cryptography: RSA,

Advanced DBMS

Course Code: MCA-307 **Contact Hours**: L-3 T-0 P-2 **Course Category**: DEC

Credits 4 Semester 5

Introduction: This course will help the students to sharpen their DBMS skills in more depth. This course describes in major details about the advanced concepts of database management systems including advanced SQL, handling unstructured data, Query execution, database security and various database models.

Course Objectives:

- To sharpen the skills on writing complex and effective queries
- To handle unstructured data by using No-SQL and MongoDB
- To understand the query execution plan
- To design and implement Distributed Databases.

Prerequisite: Basic DBMS concepts and any Programming Language.

Course Outcome: On successful completion of the course, the students will be able to: CO1: Understand and apply the concept of Advanced SQL in processing the data in large database.

CO2: Design a database for managing structured data items.

CO3: Analyze and apply emerging technologies such as Big Data, NoSQL, and MongoDB for handling unstructured data.

CO4: Apply Distributed Database Management System for handling multimedia data in distributed environment.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web- based resources as well as flipped classroom teaching will be adopted.

Advanced SQL: Joins (Outer, Inner and Self Join), Nested Queries, Views, Indexes, I Views, Embedded SQL, dynamic SQL, SQLJ, Cursor, Exception Handling, Triggers Functions. UNIT II Indexing and Hashing, B+ Tree Index Files, B-Tree Index Files, Dynamic and Static Ha Processing, Measures of Query cost, Selection Operation, Sorting, Join operation, o expressions, Query Optimization, estimating statistics of expression results, trans Relational Expressions, Choice of evaluation plans, Database Security and Authorizati database security, Access control, Multilevel security, Statistical database security, Auc databases UNIT III 1 Structured versus Unstructured data, NoSQL database concepts: Types of NoSQL database spusing MongoDB: Introduction to MongoDB Shell, Running the MongoDB shell, Mo Basic operations with MongoDB shell, Basic Data Types, Arrays, Embedded Docum with MongoDB: find () function, specifying which keys to return, query criteria, OR ospecific querying, Aggregation Introduction: Aggregation Pipeline, Aggregation using Single purpose aggregation 1 UNIT IV 1 Distributed Databases, Homogeneous and Heterogeneous Databases, Distributed Distributed Transactions and their commit protocols, Concurrency Control in Distribute Distributed Query Processing, Multimedia Databases, Mobile Data bases, Temporal dat and Semantic-based query processing, Active database <	s, Materialized rs, Procedures, 10 hrs Hashing, Query I, evaluation of ation: Levels of udit trails in the 10 hrs tabases, NoSQL system. NoSQL longoDB client, ments Querying		
UNIT II 1 Indexing and Hashing, B+ Tree Index Files, B-Tree Index Files, Dynamic and Static Ha Processing, Measures of Query cost, Selection Operation, Sorting, Join operation, expressions, Query Optimization, estimating statistics of expression results, trans Relational Expressions, Choice of evaluation plans, Database Security and Authorizati database security, Access control, Multilevel security, Statistical database security, Auc databases UNIT III 1 Structured versus Unstructured data, NoSQL database concepts: Types of NoSQL database spusing MongoDB: Introduction to MongoDB Shell, Running the MongoDB shell, Mo Basic operations with MongoDB shell, Basic Data Types, Arrays, Embedded Docum with MongoDB: find () function, specifying which keys to return, query criteria, OR of specific querying, Aggregation Introduction: Aggregation Pipeline, Aggregation using Single purpose aggregation UNIT IV 1 Distributed Databases, Homogeneous and Heterogeneous Databases, Distributed Distributed Query Processing. Multimedia Databases, Mobile Data bases, Temporal dat and Semantic-based query processing, Active database 2. 2. A. Silberschatz, H. F. Korth, S. Sudarshan, "Database System", Pearson 2016/Latest Edition. 2. 2. Conolly and Begg, "Database Management Systems", Pearson Education Asi 2. E-Commerce	
Course Code: MCA-309	
Contact Hours: L-3 T-0 P-2	Credits 4
Course Category: DEC	Semester 5

Introduction: E-commerce is abbreviated for Electronic Commerce. Its function is the transference of financial and other commerce related information using Information Technology and Telecommunications. E- commerce helps to simplify the business processes and makes them faster and efficient. These business transactions occur either as business-to-business (B2B), business-to-consumer (B2C), consumer-to- consumer (C2C) or consumer-to-business (C2B). Benefits of e-commerce include its around-the-clock availability, the speed of access, the wide availability of goods and services for the consumer, easy accessibility and international reach.

Course Objectives:

- To understand the advantages and disadvantages of using e-commerce platforms.
- To learn various e-business strategies.
- To understand the various payment methods associated with e-commerce.
- To learn the concepts of security at various levels of e-commerce.

Prerequisite: Knowledge on the basics of Information Security, Networking.

Course Outcome: Upon successful completion of this course, students will be able to:

CO1: Understand the basic concepts and principles of e-commerce.

CO2: Analyze the various e-business strategies.

CO3: Develop digital payment software for e-commerce applications.

CO4: Apply the knowledge of mobile technology for commercial aspects.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web-based resources as well as flipped classroom teaching will be adopted.

UNIT I	10 hrs	
Electronic Commerce Introduction : - Definition of E-Commerce, Electronic commerce and Physical Commerce, Architectural framework, Impact of E-commerce on business, different type of e-commerce, some e-commerce scenario, Economic potential of electronic commerce, Advantages and Disadvantages, Incentives for engaging in electronic commerce, forces behind E-Commerce.		
UNIT II	10 hrs	
E-business strategy : Introduction, Characteristics of e-Business, Business mode commerce, e-business Requirements, impacts of e-business, Strategic positioning strategies, Strategic planning process, Success factors for implementation of CRM, MRP. ERP: Introduction, need of ERP, Modules of ERP.	lels, E-Business vs E- , Levels of e- business e-business strategies,	
UNIT III	10 hrs	
Electronic Payment Methods : Overview, SET Protocol for credit card payment, E-cash, E-check, Micropayment system, Credit card, Magnetic strip card, Smart cards, Electronic Data Interchange, E-Commerce Law. Security Architecture, Encryption techniques, Symmetric & Asymmetric encryption, Digital Signatures, Virtual Private Network, IPsec, Threats, Firewalls.		
UNIT IV	10 hrs	
M-Commerce : Introduction, Attributes, customer and provider views, Architecture, Infrastructure of m- commerce, Requirement of the m-commerce, characteristics, Mobile Information device, Mobile Computing Applications, Mobile wallet, Mobile payments, Mobile portals, Pros and Cons of m-commerce, Secure Transaction Processes: Wireless Application Protocol, Bluetooth, The role of emerging wireless LANs and 3G/4G wireless networks.

Software Quality Assurance

Course Code: MCA-311 Contact Hours: L-3 T-1 P-0 Course Category: DEC

Credits 4 Semester 5

Introduction: This course introduces concepts, metrics, and models in software quality assurance. The course covers components of software quality assurance systems before, during, and after software development. It presents a framework for software quality assurance and discuss individual components in the framework such as planning, reviews, testing, configuration management, and so on. It also discusses metrics and models for software quality as a product, in process, and in maintenance. The course will include case studies and hands on experiences. Students will develop an understanding of software quality and approaches to assure software quality.

Course Objectives:

- Understand the basic tenets of software quality and quality factors.
- Be exposed to the Software Quality Assurance (SQA) architecture and the details of SQA components.
- Understand of how the SQA components can be integrated into the project life cycle.
- Be familiar with the software quality infrastructure.
- Be exposed to the management components of software quality.

Prerequisite: General knowledge of Software Engineering and Software development life cycle.

Course Outcome: Upon successful completion of this course, the students will be able to:

CO1: Understand the concepts, metrics and models in software quality.

CO2: Analyze the capability of software product to adopt quality standards.

CO3: Develop a model to assess the quality of software product.

CO4: Apply the concepts in preparing the quality plan & documents.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web- based resources as well as flipped classroom teaching will be adopted.

UNIT I	10 hrs	
Introduction: The Software Quality Challenge, what is Software Quality? Definition and objectives, need of Software Quality, Software Quality Factors (AQF): Classification of software requirements into SQF, McCall's quality model, Quality metrics, Quality trade-offs. SQA components: SQA system, SQA Architecture, Pre-project software quality components, Quality Assurance activities, SOA plan		
UNIT II	10 hrs	
Software project life cycle components: Verification and Validation, model for SQA defect removal effectiveness and cost. Infrastructure components for error prevention and improvement, Development and quality plans, Software reliability models, Reviews: Review's objectives, Formal design reviews (DRs)Software Quality metrics: Objectives of quality management, Classification of Software quality metrics, Product metrics, Implementation of Software quality metrics, limitations		
UNIT III	10 hrs	
Software quality Infrastructure: Procedures and work instructions, Templates, Checklists, 3S development, Staff training and certification Corrective and preventive actions, Configuration management, Software change control, Configuration management audit, Documentation control, Storage and retrieval. Management SQA components: Assuring the quality of software maintenance components, Software quality of external participants contribution: Objectives, SQA tools, CASE tools and their effect on Software quality, CMM and CMMI assessment methodology.		
UNIT IV	10 hrs	
Cost of software quality: objectives, classic model of cost of software quality, Applications and problems, SQA Standards, certification and assessment: Software management standards-Scope, ISO 9001, 9000-3, ISO 9126 Standard, IEEE std 1028-reviews, Considerations guiding construction of an organization's SQA system. Future of SQA: Challenges and Capabilities. Risks of distinct quality assurance processes in modern software development companies (e.g., the impact of choosing among different testing techniques)

Advanced Data Structures

Course Code: MCA-315 **Contact Hours**: L-3 T-0 P-2 **Course Category**: DEC

Credits 4 Semester 5

Introduction: This course builds upon the introductory courses in data structures. It introduces students to a number of highly efficient data structures for solving data driven computational problems across a variety of areas.

Course Objectives:

- To impart knowledge of computational and advanced concepts of Data structures and algorithms.
- To understand concepts about searching algorithms, lists, graphs and trees.
- To understand about writing algorithms and sequential approach in solving problems with advanced Data structures

Prerequisite: Knowledge of fundamentals of Data Structures, Algorithms and Analysis.

Course Outcome:

CO1: Define advanced highly efficient data structures and their properties.

CO2: Understand the concept of space and time complexity and compare the efficiency of algorithms.

CO3: Apply the advanced highly efficient data structures to solve computational problems.

CO4: Design and employ network flow algorithms to solve real world problems.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web- based resources as well as flipped classroom teaching will be adopted.

UNIT I	10 hrs
Review of data structures: Arrays, Stacks, Linked Lists, Queues. Hash tables – Hash functions, Open addressing. Dictionary. Data Frames and operations. Mult (NumPy) and operations.	collision resolution, i-dimensional Arrays
UNIT II	10 hrs
Binary trees and their properties, threaded binary trees - differentiation, leftist truuse of winner trees in merge sort as an external sorting algorithm, bin packing, search efficiency, insertion and deletion operations, importance of balancing, A insertion and deletions in AVL trees, Tries, 2-3 tree, B-tree	ees, tournament trees, Binary search trees, VL trees, searching,
UNIT III	10 hrs
Review of Graphs – DFS and BFS, MST, Shortest Path – Single Source a Distribution, Paths, Distances, Connectedness, Clustering Coefficient, Random N Small World, Barabasi-Albert Model.	nd All Pair. Degree Jetworks – Evolution,
UNIT IV	10 hrs
Network Flow: Max-Flow problem, Ford-Fulkerson algorithm, Augmentin Matching problem, Applications: Airline Scheduling, Image Segmentation. H Bianconi-Barabasi Model.	ng paths, Bipartite Evolving Networks:

Theory of Computation	
Course Code: MCA-317	
Contact Hours: L-3 T-1 P-0	Credits 4
Course Category: DEC	Semester 5

Introduction: The study of automata and the theory of computation deal with the concepts of working of automatic machines and processing of input formal language data. This subject provides an important background material to students involved in understanding the basic functionalities of automata theory.

Course Objectives:

- Introduce students to the mathematical foundations of computation including automata theory; the theory of formal languages and grammars; the notions of algorithm, decidability, complexity, and computability.
- Identify different formal language classes and their relationships
- Design grammars and recognizers for different formal languages

Prerequisite: Strong background in Discrete mathematics, Data structures and algorithms

Course Outcome:

CO1: Describe the Finite Automata, their capabilities and limitations.

CO2: Classify the different types of grammars, languages and machines.

CO3: Discover the equivalence of languages described by finite state machines and regular expressions.

CO4: Design the FA, CFG, Push Down Automata and Turing recognizable languages.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web- based resources as well as flipped classroom teaching will be adopted.

UNIT I	10 hrs	
Introduction to Theory of Computation: Definitions: Languages, Grammar, Automata, Applications of Theory of Computation, Finite Automata: DFA, NDFA, Equivalence of DFA and NDFA, DFA Minimization Regular Languages, Regular Grammars, Properties of Regular Languages, Pumping Lemma		
UNIT II	10 hrs	
Context Free Language: Introduction, Parsing and Ambiguity, Pushdown Automata (PDA), Non- Deterministic PDA, Context Free Grammar, Chomsky Normal Form, Greibach Normal Form, Parse Tree representation of Derivation Tree, Equivalence of PDA and CFGs, Properties of Context Free Grammars		
UNIT III	10 hrs	
Pumping Lemmas: Pumping Lemma for context free languages, Pumping lemma for linear languages. Turing Machine: Definition, TM as language acceptors, TM as transducers, Hierarchy of Formal Languages and Automata, Chomsky Hierarchy, Context Sensitive Languages and LBA, Unrestricted Grammars		
UNIT IV	10 hrs	
Turing machine Models and complexity, Some NP Problems, Complexity classes P and NP, Unsolvable Problem, Halting problem, Finite State Transducers: Introduction, Mealy Machines, Moore Machines, Mealy and Moore Equivalence, Limitations of Finite State transducer		
Text Books

	Mobile Computing	
Course Code: MCA-319		
Contact Hours: L-3 T-1 P-0		Credits 4
Course Category: DEC		Semester 5

Introduction: Mobile Computing is a technology that allows transmission of data, voice and video via a computer or any other wireless enabled device without having to be connected to a fixed physical link. Mobile Computing involves mobile communication, software and hardware.

Course Objectives:

- To introduce the basic concepts and principles in mobile computing. This includes major techniques involved, and networks as well as systems issues for the design and implementation of mobile computing systems and applications.
- To understand the basic concepts of mobile computing.
- To learn Wireless technologies and planning Ad-hoc Network.
- To understand telecommunication systems and gain knowledge about different mobile platforms and application development.

Prerequisite: Basic knowledge of Computer fundamentals and networking.

Course Outcome: Upon successful completion of this course, students will be able to:

CO1: Explain the basics concepts of mobile computing and types of mobile communication systems.

CO2: Understand the need of Mobile IP and TCP Protocol and architectures of Mobile Telecommunication System.

CO3: Illustrate the wireless network concepts and its routing protocols

CO4: Evaluate a large network-based system with network components.

Pedagogy: The teaching-learning of the course would be organized through lectures, tutorials, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding. Use of ICT, web- based resources as well as flipped classroom teaching will be adopted.

UNIT I	10 hrs	
Introduction to Mobile Computing: History, Types, Benefits, Application, Evolution, Characteristics of Mobile computing, Security Concern regarding Mobile Computing, Different Propagation Modes, Wireless Architecture and its types. First-Generation Analog, Second-Generation TDMA, Second-Generation CDMA, Third-Generation Systems; Cellular Concept: Cellular Systems and Principles of Cellular Networks, Hexagonal geometry cell and concept of frequency reuse, Channel Assignment Strategies, Distance to frequency reuse ratio; Electromagnetic Spectrum, Antennas and Propagation- Antennas, Propagation Modes, Line-of-Sight Transmission, Fading in the Mobile Environment, Signal Characteristics; Channel Capacity, Multiplexing, Spread Spectrum: DSSS & FHSS, CDMA.		
UNIT II	10 hrs	
Telecommunication Systems: GSM Architecture, Channel allocation, call routing, PLMN interface, GSM addresses and identifiers, network aspects, frequency allocation, authentication and security, Handoffs Technique; GPRS: network architecture, network operation, data services, Applications, Billing and charging; UTRAN, UMTS; Mobile Networking: Medium Access Protocol, Internet Protocol and Transport layer, Medium Access Control: Motivation for specialized MAC, Introduction to multiple Access techniques (MACA).		
UNIT III	10 hrs	
Mobile IP: Features of Mobile IP and its need, IP packet delivery, Key Mechanism in Mobile IP, Agent Discovery, Registration, Tunnelling and encapsulation, Reverse Tunnelling, Routing (DSDV,DSR), Route optimization, IP Handoff; Mobile TCP: Traditional TCP, Classical TCP Improvements like Indirect TCP, Snooping TCP & Mobile TCP, Fast Retransmit/ Fast Recovery, Transmission/Timeout Freezing, Selective Retransmission; Wireless Application Protocol: Introduction, Application, Architecture, Protocol Stack and Challenges.		
UNIT IV	10 hrs	
Bluetooth: Introduction, User Scenario, Architecture, protocol stack; IP Mobility, Macro Mobility and Micro Mobility, Introduction to 4G and 5G; LTE, HIPERLAN, Mobile Device Operating Systems, Special Constraints & Requirements, Commercial Mobile Operating Systems, Software Development Kit: iOS, Android, BlackBerry, Windows Phone, M-Commerce, Structure, Mobile Payment System.
