| Course Code: BAS-107 | Credits: 4 | | | | | | | | | |
| Contact Hours: L-2 T-1 P-2 | Semester: 1 | | | | | | | | | |
| Course Category: BAS | | | | | | | | | | |

Introduction: Physics is a subject that is continuously evolving with latest research. The scientific principles of physics are basis of various devices, applications and technological breakthrough. This Applied Physics course has been designed to cover the wide ranging topics of the physics that have direct impact on technological advancements. In this course you will learn various concepts of modern and device-oriented physics that will enhance your ability to apply fundamentals to various applications.

Course Objectives:

- To introduce the students with the wide-ranging topics of the modern physics such as electromagnetic theory, quantum mechanics, optics, and its applications in the form of lasers and optical fiber communication. These topics form the underlyingprinciples of various technologies.
- To impart an in-depth knowledge of everyday systems and phenomena surrounding them and explain the underlying physics.
- To enhance the ability of students to apply physics fundamentals to various modern applications for societal benefits.
- To develop a quantitative aptitude for solving engineering problems.
- To perform and interpret experiments using modern tools, techniques and write effective lab reports to various engineering problems, with an understanding of the limitations.

Pre-requisites: None

Course Outcomes: Having successfully completed this course, the student will be able to

- **CO1:** Gain knowledge of different concepts in Optics and optical devices.
- **CO2** : Understand the laws of Electromagnetic (EM) theory and solve engineering problems, based on propagation of EM waves in different media.
- **CO3 :** Explain the basic principles and laws of Quantum Mechanics and examine the quantum mechanical behavior of a particle in a 1-D box.
- **CO4:** Describe the principles of LASER and optical fibers and study their modernday applications.

CO-PO Mapping:

| СО | PO | PS | PS | PS |
|-----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|

| C04 | 3 | 2 | 2 | 2 | 2 | 2 | 1 | 1 | 1 | 1 | - | - | - | - | - |

Pedagogy: Classroom teaching which focuses upon relating the textbook concepts with real world phenomena, supplemented with periodic tutorial classes to enhance the problem-solving ability. The students would perform experiments to develop a deeper insight into the underlying principles of Physics.

UNIT-1

8 Hours

OPTICS Coherent Sources, Temporal and Spatial Coherence, Interference due to Division of wave-front and Division of Amplitude, Interference in Parallel Thin Films, Fresnel Diffraction at Straight Edge, Fraunhofer Diffraction due to Single Slit, N Slits, Diffraction Grating (absent spectra, maxima, resolving and dispersive power of grating (Formula only without derivation) Polarization, Malus Law, Brewster Law, Double Refraction, Nicol Prism, Production of Plane, Elliptically and Circularly Polarized Light. UNIT-2 8 Hours **ELECTRO MAGNETIC THEORY** Introduction to gradient divergence, curl, Gauss divergence theorem and Stoke's theorem (without proof). Electromagnetic Waves, Electromagnetic spectrum, Equation of Continuity, Maxwell's Equations, Poynting Theorem (No Derivation), Propagation of Electromagnetic Waves in Free Space, Dielectric and Conducting Medium (Qualitative), Skin Depth. UNIT-3 7 Hours **OUANTUM MECHANICS** Origin of Quantum Mechanics, De Broglie Hypothesis, Heisenberg Uncertainty Principle, Postulates of Quantum Mechanics, Wave Function and Properties, Group and Phase velocity, Time Independent Schrodinger Wave Equation, Particle in 1-D Box. **UNIT-4 5 Hours** LASER AND OPTICAL FIBER COMMUNICATION Stimulated and Spontaneous Emission, Principle of LASER, Einstein's A and B Coefficients, Components of LASER, He-Ne LASER. Optical Fibers, Step Index and Graded Index Fibers, Numerical Aperture, Acceptanceangle, Pulse Dispersion in Optical Fibers, Schematic of optical fiber communication. **Textbooks** H. K. Malik and A. PRACTICAL CONTENT

Introduction: Applied Physics lab acquaints the students with fundamental laboratory equipment and their usage. The students gain hands on experience of conducting various experiments.

Course Objectives:

- To make the students learn the usage of basic instruments in sciences like CRO, multimeter, Vernier Calipers, breadboard etc.
- > To perform various experiments related to mechanics and optics.

Pre-requisites: None

Course Outcomes:

Having successfully completed this course, the student will be able to

- Learn to work on a variety of instruments to be used later.
- Understand and correlate mechanics, optics, solid state physics and electromagnetic theory with experiments.

Pedagogy: Hands on experience on laboratory equipment with self-explanatory lab manuals.

Evaluation Scheme:

| Continuous Assessment Practical (CAP) | 10marks |
|---------------------------------------|---------|
| End Term Internal Practical (ETIP) | 15marks |

Preliminary study

- 1. Working and connection of a bread board.
- 2. To study the working of a digital multimeter and measurement of resistance, dc voltages, capacitance.
- 3. To study the working of a CRO and measurement of voltage and frequency of signals coming from a function generator.
- 4. AC bridges for measurement of capacitance, inductance etc.

List of Experiments (Any 8-10 Experiments to be done in each Semester)

- 1. To determine the refractive index of a prism using spectrometer.
- 2. To determine the wavelength of sodium vapour lamp by Newton's Ring.
- 3. To determine the wavelength of sodium light using diffraction grating.
- 4. To determine the specific rotation of cane sugar solution with the help of polarimeter.
- 5. To find the wavelength of He-Ne Laser using transmission diffraction grating.
- 6. To determine the numerical aperture of an optical fiber.

- 7. Measurement of transmission wavelength of various optical filters using Handheld spectrometer.
- 8. Measurements of emission spectra of various light source.
- 9. Measurement of logarithmic decrement of a damped harmonic oscillator.
- 10. To determine the acceleration due to gravity using bar pendulum.
- 11. To determine the acceleration due to gravity using Kater's pendulum.
- 12. To determine the moment of inertia of a flywheel about its axis of rotation.
- 13. To determine the Young's modulus of the material of a given bar by bending.
- 14. To study different modes of oscillations using coupled pendulum.
- 15. To determine the frequency of A.C. mains using sonometer and an electromagnet.
- 16. To measure the frequency of a sine-wave voltage obtained from signal generator and to obtain Lissajous pattern on the CRO screen by feeding two sine wave voltages from two signal generator.
- 17. To determine the value of e/m by J J Thompson method.
- 18. To determine plank's constant.
- 19. To study the IV characteristics of a PN junction diode, Zener Diode and LED.
- 20. To study the charging and discharging of a capacitor to find the time constant.
- 21. To find the thermal conductivity of a poor conductor by Lee's disk method.
- 22. To study Hall effect and to measure carrier concentration and Hall coefficient for unknown semiconductor.
- 23. Measurement of high resistance by ballistic galvanometer.
- 24. To trace the B-H curve for a ferromagnetic material using CRO and to find the magnetic parameters from the B-H hysteresis loop.
- 25. Study of semiconductor devices (PN junction, Metal-insulator semiconductor diode etc.) by current-voltage (I-V) and capacitance-voltage (C-V) measurements using semiconductor parameter analyzer.
- 26. To determine the resistivity of Semiconductors by Four Probe Method at different temperatures and to calculate Bandgap from it.
- 27. To study and calibrate temperature transducers.
- 28. To study the gas sensing response characteristics (I-V characteristics) of Gas Sensors.
- 29. To study response and IV characteristics of infrared (IR) Sensor.
- 30. Determine the Surface area of Solids from Nitrogen isotherm using BET Technique.

| | APPLIED MATHEMATICS | |
|------------------------|---------------------|-------------|
| Course Code: BAS-109 | | Credits: 4 |
| Contact Hours: L-3 T-1 | P-0 | Semester: 1 |
| Course Category: BAS | | |

Introduction: Mathematics is used in almost every field of engineering be it computer science and information technology wherein it may be used in modeling, machine learning, image processing etc., or by electrical engineers for signal processing, control engineering or by mechanical engineers for design, modeling, manufacturing etc. But the problem faced by engineers is to how to apply the basic mathematical concepts in engineering problem which they would be dealing in coming years. The course covers the various topics of engineering mathematics such as matrices, sequences and series, calculus of functions of more than one variable and vector calculus.

Course Objective:

- > The students will be made familiar with the concepts of matrices, sequences and series.
- To provide students with skills and knowledge of calculus of functions of several variables and vector calculus which would enable them to devise solutions for given situations they may encounter in day to day engineering problems.

Prerequisite: Fundamentals of matrices, calculus of functions of single variable, vectors.

Course Outcomes (CO)

Having successfully completed this course, the student will be able to

- **C0 1.** Determine rank, inverse, eigen values and eigen vectors of a matrix and apply them in engineering problems.
- **CO 2.** Find the basis and dimension of vector spaces and apply the concept of vector spaces using linear transform. Also, understand the concept of Laplace Transforms and solve initial and boundary value problems using Laplace transforms.
- **CO 3.** Evaluate partial derivatives and find the maxima/minima for functions of two or more variables to solve applied problems in engineering.
- **C0 4.** Understand gradient, directional derivatives, divergence and curl. Use Greens', Stokes, Gauss theorems to evaluate multiple integrals.

| COMMUNICATION SKILLS | | | | | | | | | |
|----------------------------|---------------------|--|--|--|--|--|--|--|--|
| Course Code: HMC-110 | Credits: 4 | | | | | | | | |
| Contact Hours: L-3 T-1 P-0 | Semester: Odd, Even | | | | | | | | |

Introduction: This course facilitates communication skills development by exposing the students to various nuances of effective communication. The course provides an in-depth understanding of several key concepts of Communication like importance and functions of communication, barriers to communication, active listening, group discussions, presentation skills etc. The course also provides valid inputs on the *ethical* dimension of communication to enable the students to be ethical communicators.

The highlight of the course is special emphasis on Employment Communication i.e. job application and resume writing along with preparing and appearing for Interviews and Group Discussions. The students will also be acquainted with various forms of business correspondence used in organizations on a regular basis like agenda and minutes of meetings, business letters, reports etc.

Course Objectives:

- > To enable students to evaluate their personal communications styles and improve upon it.
- > To help the students understand the contemporary trends in communication.
- To facilitate the students in becoming aware of different communication theories and their application.
- > To encourage students to develop/create their own unique style of communication.

Pre-requisites: None

Course Outcomes – After completion of the course, the students should be able to:

- **CO1** Evaluate and analyze their personal communication style while adapting their Communication to better expression of their ideas at workplace.
- **CO2** Enhance their knowledge of contemporary trends for effective Communication.
- **CO3** Effective comprehension and application of different Communication theories.
- **CO4** Synthesis their own unique communication style.

| CourseCategory: BAS | |

Introduction: A scientific study of the natural world and how it is influenced by people. It Surveys environmental studies, examining ecological, socioeconomic, and technological factors that influence the quality of life on Earth.

Course Objectives:

- Environmental science prepares students for career success in environmental monitoring and remediation, natural resources and conservation, public health, industrial environmental management.
- > The curriculum is so designed that the students get an in-depth knowledge of the environment and various issues arising due to mismanagement of resources.

Pre-requisites: None

Course Outcomes: Having successfully completed this course,

- **CO1:** Students will be able understand about the availability and sustainable use of natural resources and concept of ecosystems and biodiversity.
- **CO2:** Students will understand and evaluate the transnational character of environmental problems, their sources, sinks and control strategies along with their short-term and long term impacts to humans. Students will also learn to apply green methodologies to find solutions to address various environmental issues.
- **CO3:** Students will understand the concept of fuel technology and implement their interpretative skills to evaluate the usage and application of alternate energy sources for sustainability.
- **CO4:** Young graduates would understand the interconnected and interdisciplinary branches like Toxicology, synthesis and applications of Eco friendly polymers and demonstrate an Integrative approach to environmental issues with a focus on sustainability.

PRACTICAL COMPONENT

Introduction: Environmental studies lab acquaints the students with fundamental laboratory equipments and their usage. The students gain hands on experience of conducting various experiments.

Course Objectives:

- The aim of this course is to make the students learn the usage of basic instrumentsin Sciences like BOD Incubator, Bomb Calorimeter, pH meter, conductivity meter etc.
- Students will demonstrate interpretative skills including the ability to analyze data statistically, assess reliability, interpret results and draw reasonable conclusions

Course Outcomes:

Having successfully completed this course, the student will be able to

- > Learn to work on a variety of instruments to be used later on.
- Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales

Pedagogy: Hands on experience on laboratory equipments with self-explanatory labmanuals. **Evaluation Scheme**:

| Continuous Assessment Practical (CAP) | 10marks |
|---------------------------------------|---------|
| End Term Internal Practical (ETIP) | 15marks |

List of Experiments (Minimum eight experiments to be performed)

- 1. Determination of Dissolved Oxygen (DO) in the water sample.
- 2. Determination of Biological oxygen demand (BOD) in the water sample.
- 3. Determination of Chemical oxygen demand (COD) in the water sample.
- 4. Determination of pH, conductivity and TDS in different drinking water samples and preparation of report.
- 5. Determination of Residual Chlorine in the water sample.
- 6. Determination of Ammonia in the water sample.
- 7. Determination of Calorific Value of fuels using Bomb calorimeter.
- 8. Determination of Free Carbon Dioxide in the water sample.
- 9. Estimation of sulphur in given coal sample gravimetrically
- 10. Determination of molecular weight of polystyrene sample using viscometric method
- 11. Acetylation of primary amines using green methodology
- 12. Preparation of urea formaldehyde resin and functional group analysis using IR spectroscopy.
- 13. Preparation of aloevera/avocado soap by green method of saponification.
- 14. Preparation of biodiesel from waste cooking oil using KOH as the catalyst.

| PROBABILITY AND STATISTICS | | | | | | |
|----------------------------|--------------|--|--|--|--|--|
| Course Code: BAS 108 | Credits: 4 | | | | | |
| Contact Hours: L-3 T-1 P-0 | Semester: II | | | | | |
| Course Category: BAS | | | | | | |

Students will learn fundamental rules of Probability, discrete and continuous distributions, and statistical methods most commonly used in Computer Science and & Engineering.

Course Objectives:

- This course aims at providing the required skill to apply the statistical tools in engineering problems.
- > To introduce the basic concepts of probability and random variables.
- > To introduce the basic concepts of two dimensional random variables.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.

Course Outcomes:

On completion of the course, the student should be able to:

- **CO1:** Recall the basics of probability and apply it to determine total and conditional probabilities.
- **CO2:** Understand the concepts of Random variable, different discrete and continuous probability distributions and use it to solve the statistical situations.
- **CO3:** Evaluate the correlation between two variables and analyze statistical data using MS-Excel.
- **CO4:** Determine probabilities of making errors in hypothesis testing and draw conclusions using critical values.

CO-PO Mapping:

Prerequisite: NIL

Pedagogy: The teaching-learning of the course would be organized through lectures, assignments, projects/ presentations and quizzes. Faculty members strive to make the classes interactive so that students can correlate the theories with practical examples for better understanding

| | UNIT – I | 14 Hours | | | | | |
|---|---|-----------------------------|--|--|--|--|--|
| PROE | BABILITY AND RANDOM VARIABLES: | | | | | | |
| Concept of probability, additive and multiplicative law of probability, total and conditional | | | | | | | |
| proba | probabilities, Baye's theorem. Measures of central tendency, dispersion, kurtosis, moments. | | | | | | |
| Rando | om Variables, density and distribution functions, mathematical expectation | on, variance, | | | | | |
| stand | ard deviation and moment generating function. | | | | | | |
| | | | | | | | |
| | UNIT – II | 8 Hours | | | | | |
| TWO | -DIMENSIONAL RANDOM VARIABLES: | | | | | | |
| Jointly | y distributed random variables, Marginal and conditional distributior | is, Expected | | | | | |
| value | s, Covariance and Correlation. Central limit theorem (for independent an | d identically | | | | | |
| distri | buted random variables). | | | | | | |
